विषय :- धरण स्थिती अहवाल २०२१-२२ (पुणे प्रदेश)

संदर्भ :- १) शासन, पाटबंधारे विभागाचे पत्र क्र .पा .वि.१०७७ / २४०२/ १८६७/२ दिनांक- १९/०१/१९८२
२) शासन ,जलसंपदा विभागाचे पत्र क्र. संकीर्ण २०१४ /(२२०/२०१४)/सिं.व्य. (कामे) दि. ९/१०/२०१५

संदर्भिय शासन पत्र क्र. १ अन्वये आपले अधिनस्त अधीक्षक अभियंता व कार्यकारी अभियंत्याकडुन या कार्यालयास प्राप्त झालेल्या पुणे विभागातील पर्जन्य पूर्व व पर्जन्योत्तर २०२१ धरण निरिक्षण अहवालांची छाननी तसेच धरण सुरक्षितता संघटनेकडुन करण्यात आलेल्या Test Inspection नुसार सन २०२१-२२ वर्षाचा धरण स्थिती अहवाल संदर्भ पत्र क्र. २ अन्वये प्राप्त निर्देश नुसार मा. महासंचालक, संप्रजसंवसु, मेरी, नाशिक यांचेकडुन प्रकाशीत करण्यात आलेला आहे.

मा. महासंचालक, संप्रजसंवसु, मेरी, नाशिक यांचे निर्देशानुसार

१) उपरोक्त प्रकाशीत धरण स्थिती अहवालातील प्रस्तावनेच्या अनुषंगाने मुद्येनिहाय अनुपालन अहवाल या कार्यालयास पाठविण्याचे निर्देश संबंधित अधीक्षक अभियंता यांना आपल्या स्तरावरुन देण्यात यावेत ही विनंती.

२) सदरचा अहवाल दरवर्षी एप्रिल महिन्यात प्रकाशीत करण्यासंबंधी धरण सुरक्षा देखरेख संचालनालय, केंद्रिय जल आयोग, सेवा दिल्ली यांचे निर्देश आहेत. तथापि संबंधित अधीक्षक अभियंता व कार्यकारी अभियंता यांच्याकडुन पर्जन्य पुर्व व पर्जन्योत्तर पाहणी अहवाल तसेच अधीक्षक अभियंता मार्फत प्राप्त होणारे त्रुटी पुर्तता अहवाल विहीत कालावधीत प्राप्त होत नसल्याने सदरचा धरण स्थिती अहवाल प्रकाशीत करण्यास विलंब झालेला आहे. यास्तव पाहणी व त्रुटी पुर्तता अहवाल विहीत कालावधीत पाठविण्यात यावेत. याबाबत आपल्या स्तरावरुन संबंधित अधीक्षक अभियंता यांना निर्देश देण्याची विनंती आहे.

३) महामंडळ स्तरावरुन त्रुटी दूर करण्यासाठी आवश्यक निधी उपलब्ध करुन देण्याचो व आवश्यकतेनुरुप सनियंत्रण करण्याची विनंती आहे, जेणेकरुन धरण सुरक्षित ठेवण्यास मदत होईल.

४) शासन निर्णय संकीर्ण. २०१६ (८८/१६)) / आयएम (डब्ल्यू) दि.९/५/२०१६, नुसार पुढील कार्यवाही करण्यात यावी हि विनंती.

५) धरण तपासणी अहवालातील त्रुटीचा पुर्तता अहवाल व पर्जन्य पुर्व व पर्जन्योत्तर पाहणी अहवाल विहीत कालावधीत धरण सुरक्षितता संघटना, नाशिक येथे प्राप्त होणेच्या अनुषंगाने संबंधित अधीक्षक अभियंता (वर्ग-१ धरणांसाठी) व कार्यकारी अभियंता (वर्ग-२ धरणांसाठी) यांना आपल्या स्तरावरुन कळविण्यात यावे ही विनंती.

६) *पुणे विभागाचा एकत्रित धरणस्थिती अहवाल -२०२१-२२ चे अवलोकन केले असता वर्ग-२ धरणांचे ०३ पावसाळा पूर्व २०२१ व तसेच वर्ग-१ धरणांचे ४ व वर्ग-२ धरणांचे ३१ पावसाळोत्तर २०२१ धरण निरिक्षण अहवाल प्राप्त झाले नाहीत.*

७) *मा. महासंचालक मेरी, नाशिक यांचे वर्ग-१ व वर्ग-२ धरणांचे पावसाळा पुर्व व पावसाळोत्तर तपासणी अहवालासोबत धरणांवरील विशेष त्रुटीबाबतचे प्रपत्र (संदर्भ परिच्छेद क्र. १.११) तांत्रिक परिपत्रक जा. क्र. सं.प्र.ज.सं व सु/भ अ सं सं/प्रशा/अधि/८८/सन २०२०, दि. २१/७/२०२० सादर करण्याबाबत सर्व संबंधीतांना आपले स्तरावर सूचना देण्यात याव्यात ही विनंती.*

8) दि. 30/12/2021 पासुन संपुर्ण देशात धरण सुरक्षा कायदा-2021 लागू करण्यात आला आहे. सदर कायदयाच्या पार्श्वभूमिवर राज्यातील वर्ग-1 व वर्ग-2 धरणांचे पावसाळापुर्व व पावसाळोत्तर तपासणी अहवाल व त्रुटीचा पुर्तता अहवाल वेळेत सादर करण्याचे निर्देश संबंधित अधीक्षक अभियंता यांना आपल्या स्तरावरुन देण्यात यावेत ही विनंती, जेणेकरुन पुणे विभागाचा एकत्रित धरणस्थिती अहवाल वेळेत प्रकाशित करणे सोयीचे होईल.

हे आपले माहितीस्तव व पुढील कार्यवाहीसाठी सविनय सादर.

सहपत्र : धरण स्थिती अहवाल २०२१-२२(पुणे प्रदेश)

(म. श. आमले)
अधीक्षक अभियंता,
राज्य धरण सुरक्षितता संघटना,
नाशिक

प्रत- मा. सचिव (जसंव्य व लाक्षेवि), जलसंपदा विभाग, मंत्रालय, मुंबई यांना अहवालासह माहितीस्तव सादर.
प्रत- मा. महासंचालक, संकल्पन, प्रशिक्षण, जलविज्ञान, संशोधन व सुरक्षितता, मेरी, नासिक यांना अहवालासह माहितीस्तव सादर.
प्रत- मुख्य अभियंता, जलविज्ञान व धरण सुरक्षितता , नाशिक यांना अहवालासह माहितीकरीता सादर.
प्रत- मुख्य अभियंता, यात्रिकी (जलसंपदा विभाग), नाशिक यांना अहवालासह माहितीस्तव सादर.
प्रत- मा. मुख्य अभियंता (ज.सं),जलसंपदा विभाग,पुणे यांना अहवालासह माहितीस्तव सादर.
प्रत- मा. मुख्य अभियंता (वि. प्र), जलसंपदा विभाग,पुणे यांना अहवालासह माहितीस्तव सादर.

प्रत,

१.अधीक्षक अभियंता, पुणे पाटबंधारे मंडळ, पुणे.
२.अधीक्षक अभियंता, पुणे पाटबंधारे प्रकल्प मंडळ, पुणे.
३.अधीक्षक अभियंता, कोल्हापूर पाटबंधारे मंडळ, कोल्हापूर.
४.अधीक्षक अभियंता, सांगली पाटबंधारे मंडळ, सांगली.
५.अधीक्षक अभियंता, व प्रशासक, लाभक्षेत्र विकास प्राधिकरण, पुणे.
६.अधीक्षक अभियंता, कुकडी पाटबंधारे मंडळ, पुणे.
७.अधीक्षक अभियंता, सातारा पाटबंधारे प्रकल्प मंडळ, सातारा.
८.अधीक्षक अभियंता, व प्रशासक, लाभक्षेत्र विकास प्राधिकरण, सोलापूर.
९.अधीक्षक अभियंता, भीमा कालवे मंडळ, सोलापूर
१०.अधीक्षक अभियंता, सातारा पाटबंधारे मंडळ, सातारा
११.अधीक्षक अभियंता, (धरण व दरवाजे), म. सं. चि. सं., नाशिक.
१२.व्यवस्थापक, टाटा पॉवर कंपनी लिमिटेड, मुंबई - पुणे रस्ता, लोणावळा कॅम्प, लोणावळा, ता.मावळ, जि. पुणे.
१३.व्यवस्थापक, अॅम्बी व्हॅली सिटी, सहारा इंडिया कॉर्पोरेशन साइट, ऑफिस कॉम्प्लेक्स अंबवणे, ता. मुळशी, जि.पुणे.
१४.स्टेशन कमांडर,आय एन यस शिवाजी,लोणावळा,पुणे.
१५.मुख्य आस्थापना अधिकारी, सिम्बायोसिस विद्यापीठ,पुणे.
१६.मा.आयुक्त, कोल्हापूर महानगरपालिका, कोल्हापूर.
१७.मुख्याधिकारी,कागल नगर परिषद, कागल जि. कोल्हापूर.
१८.धरण अधिकारी,सर पिराजीराव तलाव,मुरगुड जि. कोल्हापूर

यांना माहितीस्तव व पुढील योग्य त्या कार्यवाहीस्तव अहवालासह सस्नेह अग्रेषित.

२/- कृपया वरील अहवालाची प्रत मिळाल्याची पोहच या कार्यालयास पाठवावी हि विनंती.

प्रत,

१.कार्यकारी अभियंता, पुणे पाटबंधारे विभाग, पुणे.
२.कार्यकारी अभियंता, खडकवासला पाटबंधारे विभाग, पुणे.
३.कार्यकारी अभियंता, उपसा सिंचन व्यवस्थापन विभाग, पुणे.
४.कार्यकारी अभियंता, नीरा उजवा कालवा विभाग, फलटण. जि. सातारा.
५.कार्यकारी अभियंता, भामा आसखेड धरण विभाग, पुणे.
६.कार्यकारी अभियंता, नीरा देवघर प्रकल्प विभाग, सांगवी (भाटघर) जि. पुणे
७.कार्यकारी अभियंता, टेमघर प्रकल्प विभाग, पुणे.
८.कार्यकारी अभियंता, दूधगंगा कालवे विभाग क्र.१, कोल्हापूर.
९.कार्यकारी अभियंता, मध्यम प्रकल्प विभाग क्र. २, कोल्हापूर.
१०.कार्यकारी अभियंता, लघु पाटबंधारे विभाग, (उत्तर) कोल्हापूर.
११.कार्यकारी अभियंता, सांगली पाटबंधारे विभाग, सांगली.
१२.कार्यकारी अभियंता, कोल्हापूर पाटबंधारे विभाग, (दक्षिण) कोल्हापूर .
१३.कार्यकारी अभियंता, कुकडी पाटबंधारे विभाग, क्र. १, नारायणगाव जि. पुणे
१४.कार्यकारी अभियंता, कुकडी पाटबंधारे विभाग, क्र. २, श्रीगोंदा, जि.अहमदनगर.
१५.कार्यकारी अभियंता, धोम पाटबंधारे विभाग, सातारा.
१६.कार्यकारी अभियंता, पिंपळगाव जोगे धरण विभाग, नारायणगाव जि. पुणे.
१७.कार्यकारी अभियंता, डिंभे धरण विभाग, मंचर, जिल्हा पुणे.
१८.कार्यकारी अभियंता, लघु पाटबंधारे विभाग, सातारा.
१९.कार्यकारी अभियंता, कण्हेर कालवे विभाग क्र. १, कारवाडी (कराड).
२०.कार्यकारी अभियंता, कण्हेर कालवे विभाग क्र. २, वाई, जिल्हा सातारा.
२१. कार्यकारी अभियंता, उरमोडी धरण विभाग, सातारा.
२२.कार्यकारी अभियंता, धोम बलकवडी प्रकल्प विभाग, वाई, जिल्हा सातारा.
२३.कार्यकारी अभियंता, उजनी धरण व्यवस्थापन विभाग, भीमानगर, ता.माढा, जि. सोलापूर.
२४.कार्यकारी अभियंता, सोलापूर पाटबंधारे विभाग, सोलापूर.
२५.कार्यकारी अभियंता, भीमा विकास विभाग क्र. २, सोलापूर.
२६.कार्यकारी अभियंता, लघु पाटबंधारे विभाग क्र. १, सोलापूर.
२७कार्यकारी अभियंता, उजनी कालवा विभाग क्र. ८, सोलापूर.
२८.कार्यकारी अभियंता, कोयना धरण व्यवस्थापन विभाग, कोयनानगर, जि.सातारा.
२९.कार्यकारी अभियंता, चासकमान पाटबंधारे विभाग पुणे .
यांना माहितीसाठी व पुढील योग्य त्या कार्यवाहीसाठी अहवालासह रवाना.

दोष व त्रुटी बद्दल त्वरीत कार्यवाही करुन अनुपालन / पुर्तता अहवाल संबंधित मंडळ कार्यालयामार्फत **धरण सुरक्षितता संघटना, नाशिक येथे त्वरित पाठवावे.**

२/- सदर अहवालाची प्रत ई-मेल व्दारे पाठविण्यात आलेली आहे.

प्रत - कार्यकारी अभियंता, धरण सुरक्षा विभाग क्र .३, नाशिक ४
२/- यांना ग्रंथालयात संग्रहासाठी.

प्रत - ग्रंथालय, मध्यवर्ती संकल्पचित्र संघटना, नाशिक यांना अहवालाच्या प्रतीसह माहितीसाठी.

FOREWORD

1.0 Annual Dam Health Status Report (ADHSR) 2021-22 of Class-I & Class-II Dams in Pune Region is prepared based on the Inspection Reports (Pre and Post Monsoon 2021) received from field offices and Test Inspections carried out by Dam Safety Organization (DSO), Nashik during Year 2021-22.The period of the report is from April 2021 to March 2022.

2.0 This Report comprises of following Parts.

Part	Description
Part-1	General Information
Part-2	Action Taken Report (ATR)
Part-3	Annual Dam Health Status Report (ADHSR) of Pre & Post Monsoon 2021-22
Part-4	Annual Performance Report of Dam Instruments
Part-5	Annual Performance Report of Meteorological Instruments
Part-6	National Committee on Dam Safety (NCDS) Documents
Part-7	Dam Health and Rehabilitation Monitoring Application (DHARMA)
Part-8	Health Status of Gated Dam (As per Mechanical Organization)

Part-1 & Part-6 to 8 are envisaged by DSO, Nashik & Part-2 to 5 are in the format provided by Dam Safety Monitoring Directorate, Central Water Commission, New Delhi vide letter No. 3/19/NCDS/HS/DSM/2001/627-56 Dated 28/08/2002.

2.1 Part-1: Covers General Information viz. Time schedule of Inspection, Classification of Dams, Inspection Authorities, Preparation of ADHSR for Class-I & Class-II Dams, Categorization and Standardization of Deficiencies, NRLD updation, which will be helpful to field officers. Inspecting officers are requested to follow the suggestion given in 'Part-1' while carrying out forthcoming Pre/Post Monsoon inspections of dams.

2.2 Part-2: Covers Action Taken Report (ATR) on Deficiencies pointed out in last Year ADHSR 2020-21 & Status of efforts taken by field office.

2.3 Part-3: Covers condensed summary of Dam deficiencies noticed during inspection carried out by field officer and Dam safety Organization in the Year 2021-22**.**

2.4 Part-4: Covers details of Instrumentation provided in or on Dams & its Functionality. Prepared by Instrumentation and Research Division, Nashik.

2.5 Part-5: Covers details of Metrological Instrumentation provided at Dam Site & its Functionality. Prepared by Instrumentation and Research Division, Nashik.

2.6 Part-6: Covers status of Documents (EAP, ROS & GOS, Data Book, O & M Manual, Record Drawing, Completion Report) recommended by National Committee on Dam Safety.

2.7 Part-7: Covers Progress of updation of Dam Information filled in DHARMA Web Portal.

2.8 Part-8: Covers status of Action Taken Report on Deficiencies pointed out in ADHSR- 2020-21 & Deficiencies observed in ADHSR- 2021 of Mechanical Organization for Gated Dams.

3.0 This report covers Dam Health Status of 69 Class-I &193 Class-II Dams owned by WRD and Also covers 7 Class-I & 10 Class-II Private Owned Dams.

4.0. There are total 262 Govt owned Dams in this Region. Out of 524 expected Inspection Reports, this ADHSR is based on 488 Inspection Reports received in DSO, Nashik.

Status of Receipt of Inspection Report 2021-22

(Ref. Table- 3.1 & 3.3)

Dam Owner	Expected Inspection Report in DSO			Inspection Report Received in DSO			Inspection Report Not Received in DSO		
	Class-I	Class-II	Total	Class-I	Class-II	Total	Class-I	Class-II	Total
WRD	138	386	524	134	354	488	4	32	36
Private	14	20	34	4	10	14	10	10	20
Total	152	406	558	138	364	502	14	42	56

Dams having Deficiencies

(Ref. Table- 3.6)

Dam owner	Year	No. of Dams								
		Class of Dam		Total	Class-I dams having Deficiencies			Class-II dams having Deficiencies		
		I	II		Cat-I	Cat-II	Cat-III	Cat-I	Cat-II	Cat-III
W.R.D	2020-21	69	193	262	00	54	69	0	71	193
	2021-22	69	193	262	00	65	69	00	111	191
Private	2020-21	07	10	17	00	06	7	00	05	10
	2021-22	07	10	17	00	04	04	00	07	10
Total	2020-21	76	203	279	0	60	76	0	76	203
	2021-22	76	203	279	00	69	73	00	118	201

Category wise Deficiencies

(Ref. Table- 3.7)

Dam owner	Year	No. of Deficiencies								
		Category–1			Category-2			Category-3		
		Class		Total	Class		Total	Class		Total
		I	II		I	II		I	II	
W.R.D	2020-21	00	00	00	418	150	568	797	1551	2348
	2021-22	00	00	00	469	187	656	996	1645	2641
Private	2020-21	00	00	00	08	10	18	25	45	70
	2021-22	00	00	00	05	17	22	18	62	80
Total	2020-21	00	00	00	426	160	586	822	1596	2418
	2021-22	00	00	00	474	204	678	1014	1707	2721

Gated Dams having Deficiencies (Class-I)(As per Mechanical Organization)

(Ref. Table- 8.1)

Dam owner	Year	Number of Gated Dams	No. of dams inspected	No. of dams having deficiencies	Number of Deficiencies		
					Category		
					Category-1	Category-2	Category-3
W.R.D	2020-21	40	37	37	0	724	1613
	2021-22	39	39	39	0	858	2114
Private	2020-21	02	01	01	0	07	29
	2021-22	01	01	01	0	05	35
Total	2020-21	42	38	38	0	731	1642
	2021-22	40	40	40	0	863	2149

5.0: The responsibility of Health and Safety Monitoring of Class-III dams lies with the respective Chief Engineers. Hence for Class-III Dams based on periodical inspection reports, Annual Dam Health Status Report should be prepared & published by concerned Field Chief Engineers with submission to Government & forwarded to DSO, Nashik for record.

6.0: The deficiencies shown in the present report are based on the Pre/ Post Monsoon Inspections of the Dams carried out by the field officers and reports of them received by this organization. As such, the deficiencies and action taken thereof is the sole responsibility of the field officers.

7.0 Conclusions :

Government Owned Class-I Dams :

7.01 : Category-1 Deficiency is Not noticed in all 69 Dams.

7.02 :469 No. of Category-2 Deficiencies in 65 out of total 69 No. of Dams are noticed.

7.03 :996 No. of Category-3 Deficiencies in total 69 Dams are noticed.

7.04: Out of ATR expected for 445 No. of Category-2 Deficiencies, field action for removal of Deficiencies is noticed for 43 Deficiencies (Physically fully completed -43 & Physically partly completed-31) only.

Government Owned Class-II Dams :

7.05: Category-1 Deficiency is Not noticed in all 193 Dams.

7.06:187 No. of Category-2 Deficiencies in 111 out of total 191 No. of Dams are noticed.

7.07:1645 No. of Category-3 Deficiencies in total 191 Dams are noticed.

7.08:Out of ATR expected for 147 No. of Category-2 Deficiencies, field action for removal of Deficiencies is noticed for 1 Deficiencies (physically fully complied)Completed.

Private Owned Class-I Dams :

7.09: Category-1 Deficiency is Not noticed in all 04 Dams.

7.10 :05 No. of Category-2 Deficiencies in 04 out of total 04 No. of Dams are noticed..

7.11 :18 No. of Category-3 Deficiencies in total 04 Dams are noticed.

7.12:Out of ATR expected for 8 No. of Category-2 Deficiencies, No field action is noticed for removal of Deficiencies.

Private Owned Class-II Dams :

7.13:Category-1 Deficiency is Not noticed in all 10 Dams.

7.14 :17 No. of Category-2 Deficiencies in total 07Dams are noticed.

7.15 : 62 No. of Category-3 Deficiencies in total 10 Dams are noticed.

7.16 : Out of ATR expected for 10 No. of Category-2 Deficiencies, No field action is noticed for removal of Deficiencies.

8. Points of Attention:

8.01: It is mandatory that Pre Monsoon Inspection Report must be submitted to DSO, Nashik by 30th June & Post Monsoon Inspection Report must be submitted to DSO, Nashik by 31st December every Year.

8.02: As per Dam Safety Monitoring Directorate, Central Water Commission, New Delhi Annual Dam Health Status Report (ADHSR) must be submitted in the month April every Year.

8.03: It is pointed out that only 47 (8.97 %) Pre & Post Monsoon Reports out of 524 Pre & Post Monsoon Reports are received in stipulated period.
441 (84.16 %) Pre & Post Monsoon Reports are received out of 524 Pre & Post Monsoon Reports after rigorous follow up by DSO officials & 36 (6.87 %) reports out of 594 Pre & Post Monsoon Reports were not received at all. All field officers & Higher Authorities shall take serious note of this in light of enactment of Dam Safety Act 2021.

8.04: ATR expected for 134 No. of Dams (610 Cat-2 Deficiencies). However ATR was received for 30 No. (192 Cat-2 Deficiencies) of Dams i.e. only 22.91 % of Cat-2 Deficiencies fully addressed & for 30 No. (192 Cat-2 Deficiencies) of Dams i.e. only 16.66 % of Cat-2 Deficiencies partially addressed.

8.05: Concerned Chief Engineer should monitor and instruct field Superintending Engineer & Executive Engineer regarding submission of ATR to DSO, Nashik to reflect exact status of Dam Safety works.

8.06: The Chief Engineers should compel all Superintending Engineer & Executive Engineer of concerned Dams to carry out periodic inspections and submit report to D.S.O. in time.
Brain storming of field officer regarding Dam Safety aspect is must otherwise the whole exercise done by Dam Safety Organization tends to become futile.

8.07: In case of Mechanical Organization inspections, Out of ATR expected for 888 No. of Category-2 Deficiencies, 33 Action Taken Report (ATR) from field for removal of Deficiencies are received

8.08: Earthen dam uprooting of trees & shrubs grown on embankment of Dam follow CWC guidelines for safety of dams 2018. [Page 54/90]

8.09: Review of a need for painting of Gates & structural parts to avoid further deterioration in consultation with Mechanical organization.

8.10: Being the dam owner, safety of the dam is the prime responsibility of the concerned field Executive Engineer. In order to ensure safety of dam/dams in his jurisdiction, he shall initiate The procedures for removal of deficiencies noticed in the Pre-Post Monsoon Inspection as well as pointed out in this ADHSR by following due procedure of approval.

8.11: Higher authorities i.e. Superintending Engineer and Chief Engineer shall accord timely sanction to most economical and sustainable technical work required for Deficiency removal.

8.12: Executive Director, Krishna Valley Irrigation Development Corporation are requested to make required funds available to the Deficiency removal and monitor the progress periodically. This will help in keeping the Dam safe.

8.13: As per Marathi Government Resolution Misc. 2016/(88/16)/IM(W) Dtd.- 09/05/2016, Responsibility of Approval of M & R Work's Procurement List & Prioritization of execution of work & its implementation is entrusted to Superintending Engineers. And Responsibility of Review & monitoring is entrusted to Chief Engineers.

8.14: Hence, It is expected that Superintending Engineers should verify whether Works of removal of Deficiencies are proposed to address Deficiencies pointed in ADHSR while approving Procurement List of the M & R works of the Project.

8.15:Gist of report is that though inspection of Dams are carried out &Reports are published however status of ATR depict that despite of M&R expenditure extreme poor performance of removal deficiency is observed. Field officers should take serious note of this.

8.16: Central Government has enacted Dam Safety Act 2021 from date 30/12/2021 to provide for surveillance, Inspection, Operation & Maintenance of the specified dam for prevention of dam failure disaster & to provide for institutional mechanism to ensure their safe functioning & for matters connected therewith or incidental thereto So that Dam owner shall give specific attention for implementation of Dam Safety Act 2021.

I hope this report will serve desired expectations expressed by Dam Safety Monitoring Directorate of C.W.C.New Delhi. Any error, discrepancies omissions if any may please kindly by brought to the notice. So that it can be taken into consideration in the next report.

The efforts taken by the Superintending Engineer, Dam Safety Organization, Nashik and his team, for completion of this report are highly appreciated.

INDEX

Part-1

General Information

Part-1 General Information

1.01 Introduction:

As per National Register of Large Dam (NRLD) published by CWC, New Delhi, Maharashtra has the distinction of having largest numbers of dams in the country.

A separate Organization called Dam Safety Inspectorate, Nashik was functioning in the State since 20/10/1980.Its status is upgraded as Dam Safety Organization, Nashik from 01/05/1985. The organization consists of a circle level unit headed by Superintending Engineer under which Executive Engineer, Dam Safety Division No.1, Nashik looks after Pune Region.

1.02 Inspection of Dams:

The Government of Maharashtra has delegated powers of Pre and Post Monsoon Inspection to competent authority for Pre and Post Monsoon Inspection of the Dams vide G.R Dtd.23/08/1998.

Dam Safety Organization, Nashik carries out scrutiny of the inspection reports received from field offices for Class-I &Class-II Dams. Significant & Serious deficiencies observed during scrutiny are immediately intimated to Field Offices to carry out Remedial Measures.

The “Annual Dam Inspection Programme” is sanctioned by Director General, DTHRS MERI Nashik. Test inspections are carried out by Dam Safety Organization as a third party inspection to crosscheck the inspections carried out by Field Offices.

Pune Region comprising 262 Government owned Completed Dams (includes 2 National Important Dams, 13 Century Old Dams & 5 Dams under Construction Dams) & 17 Private Dams

DSO, Nashik monitors all Government Dams from safety point of view. In addition to this DSO, Nashik carried out detailed inspections of 17 Private Dams (6 owned by TATA, 3 owned by KMC Kolhapur, 2 owned by INS Shivaji, Indian Navy, Pune, 2 owned by Symbiosis, Lavale, Pune, and 1 owned by Kagal Nagar Parishad Kolapur.) on Consultancy basis.

1.03 District wise and Class wise break up of number of Dams :

District	No. Of Class-I Dams	No. Of Class-II Dams	No. Of Class-III Dams	Grand Total
Pune	24	45	21	90
Satara	15	30	9	54
Sangli	3	52	29	84
Kolhapur	21	37	6	64
Solapur	3	25	47	75
Ratnagiri	1	0	0	1
A.Nagar	1	4	0	5
Osmanabad	1	0	0	1
Govt. Total	**69**	**193**	**112**	**374**
Pune	7	6	0	13
Kolhapur	0	4	0	04
Private Total	**7**	**10**	**0**	**17**
Grand total	**76**	**203**	**112**	**391**

1.04 Time Schedule of Inspections :

The Government of Maharashtra has designed systematic approach for monitoring each and every dam. The periodical inspection of dams must be completed as per following schedule.

Type of Inspection	Last dates for	
	Completion of Inspection	**Sending of Inspection reports to concerned authorities.**
(1) Pre Monsoon	15th May	30th June
(2) Post Monsoon	30th November	31st December
(3) Special inspection before the first filling (Report need not be sent to Dam safety Organization)	30th April	31st May
(4) Special inspection after the first filling	Within one week after the lake attains the intended storage level.	Within one week from the date of inspection.
(5) Special inspection after a severe distressing event or accident or incident.	Immediately after the event is noted.	Within one week form the date of inspection?

1.05 Classification of Dams :

The dams are categorized into three types based on their component and features as below.

SR No	Type of Dam	Height from general level of deepest foundation in m.	Impounded gross storage capacity Up to FRL in M Cum	Spillway capacity	Type of spillway
1	**2**	**3**	**4**	**5**	**6**
1	Class-I Dam	Above 30 m	Above 60 M Cum	Above 3,000 Cumecs	Gated Spillway
2	Class-II Dam	15 m to 30 m	15 M Cum upto 60 MCum	2,000 to 3,000 Cumecs	Ungated Spillway
3	Class-III Dam	10 m.to15m	1.0 M Cum upto 15 MCum	2,000 to 3,000 Cumecs	Ungated Spillway

Note :

1) All dams more than 15 meters in height will be classified under “Large Dam” Irrespective of other parameters.
2) All dams less than 10 meters in height will be classified as “Small Dam” irrespective of other parameters.
3) In order to determine the exact category of “Large Dam” following procedure shall be followed. The category of dam as per (I) Height (II) Storage Capacity & (III) Spillway Capacity shall be worked out individually. The highest of category shall be appropriate category of dam
4) Apart from above following additional parameters shall be considered for deciding

the category of the dams between 10 to 15 m. in height.

a) Dams having length of crest more than 2000 m. OR
b) Dams having specially difficult foundation problems OR
c) Dams with unusual design shall be classified under “Large Dams (Class-II)”
d) Dams having length of crest more than 500 meters but less than 2000 meters Shall be classified as “Large Dams (Class-III)”

1.06 Field Inspection Authorities :

The designated inspection authority for periodical inspection of dam depending upon the classification of type of dam is as below

Sr. No.	Type of Dam	Inspection authority	Inspection Reports to be sent to	Test Inspection
1	2	7	8	9
1	Class-I Dam	Superintending Engineer/ Administrator	1) Chief Engineer 2) Superintending Engineer Dam Safety Organization.	Test Inspection by the Regional Chief Engineer/ Chief Administrator for the dams having height more than 60 m or storage capacity more than 1000 MCum or spillway capacity 10000 Cumecs or more
2	Class-II Dam	Executive Engineer	1) Superintending Engineer/ Administrator 2) Superintending Engineer, Dam safety Organization	
3	Class-III Dam	Deputy Engineer	1)Superintending Engineer/ Administrator 2) Executive Engineer	

1.07 Preparation Of Annual Dam Health Status Reports Of Class-I & class-II Dams :

Dam safety Organization carried out scrutiny of the periodical inspection reports of Class-I & Class-II dams received from field offices and significant deficiencies are immediately communicated to concern authorities to carry out remedial measures.

Based on all periodical inspection reports from Field Offices and Test Inspections carried out by DSO, Nashik, Region wise Annual Dam Health Status Report is published by DG, DTHRS, MERI, Nashik and submitted to Government, CWC and circulated to all concerned Field Offices.

1.08 Preparation of Annual Dam Health Status Report of Class-III Dams :

The responsibility of Health and Safety Monitoring of Class-III dams lies with the respective Chief Engineer. Hence for Class-III Dams based on periodical inspection reports, Annual Health Status Report of Class-III dams should be prepared by concern Field Chief Engineers and forwarded to DSO, Nashik for record.

1.09 Guidelines Regarding Preparation of Annual Dam Health Status Report :

ADHSR is prepared in DSO, Nashik as per Central Water Commission New Delhi’s guidelines received vide letter Dtd. 28/08/2002. As per this letter it is intimated that all States / Organizations should submit the Annual Dam Health Status Report (ADHSR) in the month of ‘April’ every year.

1.09.1 Categorization of Deficiencies

The deficiencies observed are categorized as per CWC, New Delhi's letter Dtd. 28/08/2002 as below

Category	Action to be taken
Category-1	Dams with Major deficiencies which may lead to dam failure.
Category-2	Dams with Major rectifiable deficiencies needing immediate attention.
Category-3	Dams having Minor/ No deficiencies.

For further detailing of deficiencies based on the nature and priority of deficiency, DSO, Nashik has standardized all the three types of deficiencies.
These standardized deficiencies are as follows

1.09.2 Category-1 Standard Deficiencies :

Sr. No.	Deficiencies	Category identifier
1 E -	**Earthen Dam**	
1	Seepage water has created an open pathway or pipe through dam, which may lead to failure of dam by piping.	1E.1
2	Heavy seepage with muddy or turbid water is observed through any part of dam.	1E.2
3	Seepage water flooding from a boil in the foundation or from relief well on downstream side of dam.	1E.3
4	Outlet well / Head regulator well and hoisting structure is collapsed/completely damaged.	1E.4
5	Outlet pipe in the body of the dam is damaged/failed and uncontrolled outlet-releases eroding Toe of dam.	1E.5
6	Debris stuck under gate or gate leaf is cracked / failed resulting uncontrolled flow through outlet.	1E.6
1 M	**Masonry Dam**	
1	Downstream movement or tilting of dam.	1M.1
2	Differential movement of dam blocks/monoliths.	1M.2
3	Vertical Displacement with visible cracking in the body of dam.	1M.3
4	Spillway gate damaged / not working.	1 M.4

1.09.3 Category-2 Standard Deficiencies :

Deficiency Cat II (A)	Deficiency Cat II (B)
Earthen Dam	
A.1: Boil/leakage/ seepage/ wet patches/ slushiness in Earthen Dam.	**B 1:** Dam section is not as per design
A 2: Standing pool / Ponding / Water Logging / Slushy condition on D/S of Dam	**B 2:** Cross and toe drains not working properly/ drains silted or vegetated causing stagnant pool of water.
A 3 : Leakages in vicinity of junction between earthen dam & masonry dam portion.	**B 3:** Considerable settlement of embankment / Rock toe/Pitching/ U/S & D/S slops, bulging/concavity of slopes.
A 4 : Major leakages through outlet conduit/pipe joints/Gates.	**B 4**: Longitudinal / Transverse cracks/ low area/sink holes/gully formation on top side slope of earthen dam.
A 5 ; Relief wells not functioning properly./	**B 5:** Outlet gates not functioning properly. Stem

Deficiency Cat II (A)	Deficiency Cat II (B)
Abnormal rise in water level in wells.	rod is bent(Service gate/Emergency gate/Stop log gate/sluice gate)
A 6 : Outlet well is damaged/not in good condition /cracks observed/jets of water in well.	**B 6:** Approach to dam through all weather road not constructed/maintained properly.
A 7 : Retrogression /scouring in tail channel.	**B 7:** Waste weir/waste weir bar not in good condition/coping damaged/leakage through waste weir.
Masonry / Concrete Dam	
A 8 : Drainage gallery inaccessible/No adequate lighting./ No dewatering arrangement or failure.	**B 8:** Pointing on U/S face of dam not in good condition./deterioration spalling of concrete surface.
A 9 : Foundation drains / holes/ porous pipes/chocked/ no seepage through foundation drain holes.	**B 9:** Instruments not in working condition.
A 10 : Heavy leakages through porous pipes/ through dam body in gallery /monolith joints.	**B 10:** Leakages through River sluice.
A 11 : Sweating / seepages through D/S of masonry dam	
A 12 : Excessive considerable leaching from seepage water.	
A 13 : Swelling / minor cracking observed on body of dam.	
A 14 : EDA / Stilling basin damaged/Hydraulic performance not good.	
A 15 : Leakages through spillway /piers//junction of flank wall.	
A 16: Damages / foundation erosion/ scour/undermining observed in vicinity of flank walls/ guide walls/ junction walls/return walls.	
A 17 :End weir not in good condition / scouring noticed on immediate D/S.	
Spillway gates	
A 18 :Wire ropes of hoist not in good condition/hoisting structure damaged/cracked.	**B 11**: Surface paint/steel surface of spillway gates deteriorated.
A 19 : Alternative power system Generator for gate operation not working properly.	**B 12** : Damage to Rubber seals/ considerable Leakages through gates.
A 20 : Operation of gates not smooth needs repair.	
Other structures	
	B 13 : Heavy vegetation/big trees on embankment top/slope making dam portion not accessible.
	B 14 : Deck bridge slab/ pier / damaged cracked/ alignment disturbed.
	B 15 :Major portion of Pitching damaged/washed away.

1.09.4 Category-3 Standard Deficiencies :

Sr. No.	Deficiencies	Category identifier
1	Profuse growth of bushes and trees over dam portion.	3.1
2	Guard stones/ chainage stones and parapet wall not provided /damaged.	3.2
3	Growth of aquatic weeds in reservoir of dam is observed.	3.3
4	Ant hills or crab holes/holes made by rodents/animals**.**	3.4
5	Minor undulation/ settlement/slightly less top width/ Rain cuts / pot holes observed on dam top & slopes.	3.5
6	Access road**/**Dam top road surface/ slab joints damaged needs repair.	3.6
7	Pitching on embankment of dam is dislocated /disturbed at some places.	3.7
8	Breaching section is not accessible/ Instruction board showing operation of breaching section is not available.	3.8
9	Section of Toe drain/cross drain/ out fall drain/rock toe damaged at some places. Pitching of drains disturbed. Some weed, vegetation growth/ siltation in nalla/drains. Nalla needs regradation.	3.9
10	Surface drain/ Catch water drains for berms are silted /damaged	3.10
11	Electric cable & wiring are damaged/not in good condition.	3.11
12	Minor leaching in the gallery/ body of dam.	3.12
13	V – notches/ measuring devices are not in working condition/ silted /damaged/ not provided.	3.13
14	Mosquito net door is to be provided to avoid entry of reptiles in the gallery.	3.14
15	Damage to natural slope protection works,guniting damaged/washed out. Wire mesh exposed.	3.15
16	Guide wall/Divide wall/Guide bund/End Sill wall damaged/ Pointing is not in good condition/weep holes not functioning. At some places w.w bar/coping is damaged.	3.16
17	Provision of access to stilling basin/ladder not provided.	3.17
18	EDA ponding with water not possible to Inspect.	3.18
19	Minor erosion/ Scouring/Retrogression/ pot holes in tail channel. Ponding, standing Water in EDA / Tail channel.	3.19
20	Lubrication/painting/minor repairs required for parts of Gates / hoisting Structure/Rubber seal damaged/ replacement.	3.20
21	Approach bridge to intake well / spillway gates railing /flooring plates damaged / need repairs. Need of ladder for inspection well/EDA.	3.21
22	Minor leakages through river sluice/outlet/ gates.	3.22
23	Air vent not periodically cleaned./damaged/closed.	3.23
24	EAP / ROS /GOS /Record drawings/ not provided / not prepared at dam site.	3.24
25	The record of periodical measurements of leakage discharge from dam / relief well is not maintained.	3.25
26	Street light on dam top is not provided/not working.	3.26
27	Security / CC TV camera/entry gate not provided/not working.	3.27
28	Sufficient staff arrangement is not available for security ,instrument readings and measurements and maintenance on dam site.	3.28
29	Fencing around dam is not provided/ damaged due to which unauthorized trespassers are seen.	3.29
30	Communication facilities like mobile wireless, warning devices, telephone is not available at dam site.	3.30
31	Sufficient stock of spares/stationary required is not available at dam site. Storage arrangement not provided at site.	3.31
32	Minor leakages through masonary/ concrete dam body/gallery of dam/outlet well.	3.32

Sr. No.	Deficiencies	Category identifier
33	Security cabin at dam entrance/Irrigation outlets not provided/damaged/needs repair.	3.33
34	Approach channel silted.Trash rack need to be cleaned/ damaged/not provided.	3.34
35	Minor damages to spillway / masonary/ concrete portion of dam/outlet well.	3.35
36	Porous pipes/foundation drains / holes not periodically cleaned.	3.36

1.10 Special Deficiencies

Director general, DTHRS, Nashik has circulated a circular of special deficiencies dated 21/07/2020(सं.प्रा.ज.सं.सु./म.अ.सं.सं./प्रशा/अधि/88/सन2020) to all field offices to attend the above special deficiencies along with periodical inspection report

Statement No-1

Special Attention Deficiencies (Civil), Attached with Pre- Post monsoon Inspection Reports

(Availability of Compulsory Manpower & Documents at dam Site)

Deficiency category	Deficiency
Sp-1	Whether Emergency Action Plan is kept at dam site or not ?
Sp-2	Whether Approved Reservoir Operation Schedule is kept at dam site or not ?
Sp-3	Whether Latest approved gate Operation Schedule is to be kept at dam site or not ?
Sp-4	Whether Record Drawings sets are kept at dam site / section / Sub Divn. office or not ?
Sp-5	Whether Standard Operating Procedure copy with Updated contact numbers of all concerned authorities are kept at dam site or not ?
Sp-6	Whether Chart showing location of rain gauges / river gauges on U/s catchment & approximate travel time of discharge is maintained & displayed at dam site.
Sp-7	If CCTV is established, how observations are done round the clock & who is responsible person to observe these.
Sp-8	Whether Sufficient arrangement of staff is available or not. Engineers / Operators / Electrician / Watchmen / Security etc. and also staff for instrument reading, measurement &maintenance. They may be Govt. employee or through outsourcing. This staff is especially compulsory during monsoon period.
Sp-9	Whether Communication facilities like mobile, wireless, warning devices, telephone are available at dam site, or otherwise.
Sp-10	Whether The record of periodical measurements of leakage discharge from dam / relief well etc. is maintained or not.
Sp-11	Is there any profuse growth of bushes or trees over any portion of dam ?

Statement No-2

Special Attention Deficiencies (Mech & Elect), Attached with Pre- Post monsoon Inspection Reports

(Compulsory Minimum repairs, For Spillway Gates & Gallery)

Deficiency category	Deficiency
Sp-12	Whether Wire ropes of hoist are in good condition/hoisting structure damaged/cracked ?.
Sp-13	Whether Alternative power system- Stand by two Generators for gate operation are working properly or not ?
Sp-14	Whether the **o**peration of all gates is smooth or needs repair ?.
Sp-15	Whether Lubrication/ painting/ minor repairs for parts of Spillway Gates and Hoisting structure are carried out or not ?.
Sp-16	Whether Rubber seals of gates are damaged or needs replacement ?.
Sp-17	Due date of painting of each part should be displayed on dam site as per mechanical maintenance schedule
Sp-18	Whether Electric cable / wiring / lights etc are in working condition are not ?
Sp-19	Whether gallery is having excessive leakages ?

1.11 Standard Procedure For Confirmation And Removal of Category-1 Deficiency of Dams

A systematic approach and working methodology is very essential to monitor the safety aspects of the dams.

During the scrutiny of Pre and Post Monsoon report or during DSO test Inspection whenever it is found that the deficiency is of Category-I, it will be immediately communicated to concern SE and CE.

Concerned SE /CE should immediately visit the dam and should satisfy himself that the deficiency pointed out is a major deficiency which may lead to failure of dam and should confirm to the DSO, Nashik regarding the classification of deficiency as per his opinion.

After conformation from Field Chief Engineer it will appear in ADHSR.

Remedial Measures for Category-I deficiency removal shall be undertaken immediately. And after completion of physical work of deficiency removal, Concern Chief Engineer should communicate status to DSO, Nashik immediately.

1.12 National Register of Large Dams (NRLD) :

Dams having Height above 10 meter are classified as per the norms of International Commission on Large Dams (ICOLD).

NRLD is consists of information of Large Dams as per 20 columns proforma covering information regarding salient features.

NRLD is updated in every January. Hence Field offices need to submit the information of new dams every year to DSO by December to incorporate it in NRLD. The response regarding submission of NRLD information from field offices is very poor, it is always observed that DSO officials has to take rigorous follow up to obtain requisite information.

1.13 Point of Attention :

General	Details
Inspection details	1) The periodical inspection reports of all the dams shall be sent in original instead of carbon or xerox copy. (Signed copy shall be emailed in advance to DSO. 2) Ambiguous or incomplete replies shall be avoided. It is necessary to check point wise replies, which should clear and self explanatory. 3) The deficiencies observed frequently since long shall be deleted after verification of rectification work. 4)The inspecting officer is advised to write the word “special attention” in inspection report against all such items wherever immediate attention is necessary from concerned field officer in charge of dam from safety point of dams and life & property on the downstream & would be useful for identifying categorization of deficiencies in Dam Safety Organization, Nashik. 5) The information in Appendix II (Performance of meteorological instruments installed) and Appendix III (performance of taking observation of instruments installed in large dams) shall be filled properly and complete. 6) The compliance of rectification work of deficiencies of each dam mentioned in status report shall be communicated to Dam Safety Organization, Nashik every year so that this can be included in the Action Taken Report Part-I of status report.
Salient features	1) Due care shall be taken while filling the salient features of dam and information regarding N.C.D.S. documents. 2) Date of inspections is not mentioned in some Pre / Post Inspection Reports. This is mandatory since it will reflect in the Annual health status report.
Dam and Dam reach (Embankment)	1) If the existing dam section is found under section as compared to the design section during inspection then the work of re-sectioning shall be carried out and opinion of inspecting officer shall be stated in inspection report. 2) The extent of embankment settlement shall be furnished with its measurement & Reduced Distance (R.D.) and it shall be with compared designed cross section.
Gallery / Shaft Drainage (Concrete / Masonry)	The monolith wise quantum of leaching in galleries and all type of leakages in dam shall be noted in inspection report.
Spillway and Energy Dissipation Structure	The quantum of retrogression/scouring in tail channel shall be given in inspection report.
Hydro-Mechanical Component and Turbine/Pump	The trial of spillway gates shall be carried out before monsoon every year & observed condition shall be mentioned in inspection report.
Instrumentation	It is observed that the information regarding number of instruments installed does not tally for pre & post monsoon inspection report of the same dam. In some cases it is observed that the list of instruments given in previous year do not appears in the current year. These discrepancies should be avoided.

Part-2

Action Taken Report

Part-2: Action Taken Report (ATR)

2.1 General :

Annual Dam Health Status Reports (ADHSR) of Dams for Year 2020-21 was published by Director General, DTHRS, MERI, Nashik in June 2021 and submitted to Govt. of Maharashtra and also circulated to all Field Offices ranging from Divisions to Corporations for information and carrying out remedial measures.

It is expected that Field Officers should go through the Status Report scrupulously and attend remedial measures on priority basis and submit Action Taken Report (ATR) for reflecting necessary repairs & attention given for maintaining safety of Dams in the ADHSR.

2.2 ATR Submitted by Field Offices:

In this region there are Government owned 69 Class-I & 193 Class-II Dams & Private owned 07 Class-I & 10 Class-II.

As per ADHSR 2020-21 Action Taken Report was expected from Government owned 54 Class-I Dams & 69 Class-II Dams & Private owned 3 Class-I & 4 Class-II Dams.

However Action Taken Report were received from Government owned 25 Class-I Dams & 5 Class-II Dams & Private owned 0 Class-I Dams & 0 Class-II Dams. *[Ref. Table 2.1, 2.2 & 2.3]*

2.3 Action Taken Report of Class-I & Class-II Dams (Government & Private Owned)

	Category	Total Dam				ATR received				Physically fully completed						Physically partly completed					
	Class	I		II		I		II		I		II		%		I		II		%	
	No. of	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency
	Category 1																				
1	**WRD**	Nil																			
2	**Private**																				
	Category 2																				
3	**WRD**	54	445	69	147	25	183	5	9	1	43	1	1	6.66	22.9	17	31	1	1	60	16.66
4	**Private**	6	8	5	10	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0	0
	Total	**60**	**453**	**74**	**157**	**25**	**183**	**5**	**9**	**1**	**43**	**1**	**1**	**6.66**	**22.9**	**17**	**31**	**1**	**1**	**60**	**16.66**

2.4 Conclusions :

Out of 54 Class I dams ATR of 29 dams are not received in DSO. Also Out of 69 Class II Dams ATR of 64 dams are not received. After scrutiny of ATR received it is concluded that only 6.66% dams and 22.91% deficiencies are physically fully completed. And 60% dams and 16.66% deficiencies are physically Partly completed. Field officers & higher Authorities shall take note of this seriously.

2.5 Points of Attention:

A) Government & Private Owned Dams :

Sr. No.	Expected ATR in DSO	Received in time in DSO		Even after follow up by DSO		ATR were not received	
		Number	%	Number	%	Number	%
1	610	192	31.47	0	00.00	418	68.53

1. ***Concerned Chief Engineer should monitor and instruct field Superintending Engineer & Executive Engineer regarding submission of ATR to DSO, Nashik to reflect exact status of Dam Safety works. Otherwise whole exercise of publishing ADHSR will be futile.***

2. ***Concerned Dam owner should give serious attention regarding submission of ATR to DSO, Nashik to reflect exact status of Dam Safety works. Otherwise whole exercise of publishing ADHSR will be futile.***

Sr.No	Dam Features	Date of Inspection	Inspecting Officer	Main Component of Dam	Significant Deficiencies Noticed	Remedial Measures Suggested	Implementation Status
1	2	3	4	5	6	7	
[A]Chief Engineer (W.R.), Water Resources Department, Pune							
(1) Superintending Engineer, Pune Irrigation Circle, Pune							
(a) Executive Engineer, Pune Irrigation Division, Pune 1							
1	Name :**Bhatghar** (Gated) Tal. BhorDist.Pune Year of completion :**1926** Location : Longitude **73^{0}52'** Latitude **18^{0}11'** Height :**57.62 m** Gross Capacity : 672.**65 Mm^3** Spillway capacity:**1600 m^3/sec** Sr.No.In Large Dam Register 2009: **MH09HH**0048	12.05.2020 28.10.2020	Shri. S. D. Chopade, S.E., P.I.C., Pune	Gallery Body Wall EDA Spillway	1. There is no proper ventilation & lighting & handrails arrangement.(A8) 2. Problems of inadequate drainage-Clogged porous pipes. The proper arrangements are not made for the measurement of seepage into the gallery. (A8) 3. The total seepage into gallery from the porous pipes in the dam at lake full condition - 8.50 LPS @ FRL (A10) 4. There been considerable leaching observed from the seepage water and deposition of line near the seepage exit spots. (A12) 5. The existing pointing on U/S side is in lime mortar and it seems to be slightly weak (broken / washed out). (B8)	Repairs should be carried out. Proper arrangement should be made for the measurement of seepage into gallery. Repairs should be carried out in consultation with Mechanical Organization. It should be kept under observation & leaching material should be sent to MERI, Nashik Lab for testing. Necessary repairs shall be carried out. Necessary remedial measures should be carried out.	Work Planned to be rectified in year 2021-2022 Porous Pipes are cleaned Arrangements for seepage discharge will be made. Porous pipes are Cleaned. After monsoon leaching material will be sent to Meri Nasik. The work is proposed to carried out under DRIP-II programmed

					6. Due to erosion in central spillway stilling basin, pond cannot be drained automatically below the adjacent nala bed level.(A14)	Necessary remedial measures should be carried out.	The work is proposed to carried out under DRIP-II programmed
				Spillway Gate	7. Some portion of right side guide wall of south spillway is broken and damaged at ground level. (A16)	Necessary repair should be done.	Necessary Repairs are carried Out.
				Crest of Dam	8. D/S face @ south spillway needs grouting with epoxy pointing repairing. (B7)		Pointing work is completed.Grouting work will be taken in hand in2021-22
				End Weir Outlet	9. Due to rust, there are small holes to gate no. - 3, 5, 10 & 13 of south & 11, 12, & 13 of central spillway observed. (B11)	Necessary remedial measures should be carried out.	Such holes are closed by provding additional M..S.Plates by welding.
				General	10. Nut bolts of guide frame are not in good condition & need to be replaced. Due to missing or loose bolts, there are leakages. Conservator mesh of gates is broken. (B12)	Necessary remedial measures should be carried out.	This work will be taken in hand in 2021-22
					11. Pointing on Crest should be done with epoxy material. (B8)	Necessary remedial measures should be carried out.	This work will be taken in hand in 2021-22
					12. The check wall / end weir is damaged & erosion is observed at D/S of End weir.(A17)	Necessary remedial measures should be carried out.	This work will be taken in hand in 2021-22
					13. The vibrations and noise are noticed in	Necessary repair should be done in consultation with IRD,	Mechanical wing is doing necessary

					operation of outlet gates.(B5) 14. Uplift pressure cell & Water stage recorder are not working.(B9	Nasik.	action. This work is Proposed in 2021-22
2	Name :**Vadivale**(Gated) Tal. Maval Dist.Pune Year of completion :**1999** Location : Longitude **73^{0}31'16"** Latitude **18^{0}49'20"** Height :**29.00 m** Gross Capacity: **40.87. Mm^3** Spillway capacity: **746.82m^3/sec** Sr.No.In Large Dam Register 2009: **MH09MH1517**	14.05.2020 30.10.2020	Shri. S. D. Chopade, S.E., P.I.C., Pune	Waste Weir Bar and Tail Channel Spilllway	1. There is a scouring on downstream side of the bar and/or EDA observed. (A7) 2. The surface of ogee is not smooth & it is not in profile. Big cavities, pot holes are observed on ogee surface. Heavy leakage is observed through body of spillway, through junction of each spillway construction joint. Big cavities are observed and needs rectifications. (B8) 3. Concrete at crest level of spillway is damaged and needs rectifications. (B7) 4. Concrete / masonry deterioration observed. (B7) 5. Significant leakage on spillway glacis observed. (B7) 6. Mild seepage on D/S face of masonry. (A11) 7. Significant leakage at Overflow Section & non-over flow section junction on downstream face. (A15) 8. Deterioration of concrete in ogee	Necessary remedial measures should be carried out. Location & quantum of leakage should be investigate causes of leakage should be ascertained & proper remedial measures to prevent leakages should be carried out. Necessary remedial measures should be carried out Necessary remedial measures should be carried out Necessary remedial measures should be carried out Leakages should be attended in time by providing suitable remedial measures after ascertaining the exact cause of leakage. Necessary remedial measures should be carried	Work is taken in Hand Due to Covid 19 unavailability of labor, progress of work is stopped. Work will be completed by the end of june-2022 Work is taken in Hand.Work of Sr.No.6&7 completed physically and fully .Work of Sr.No.9 Completed Partelly.due to Covid 19 Unavailabilityof Labour ,progress

					portion. (B8) 9. Honeycombing to RBC outlet gate, overflow section & Pier concrete above crest RL. (B5) 10. The heavy leakage observed from wall of intake wells & which is collected in conduit. (B10)	out Leakages should be attended in time by providing suitable remedial measures after ascertaining the exact cause of leakage.	of remaining work stopped. Work will be completed by the end of June2022
3	Name :**Kasarsai**(Gated) Tal. MulashiDist.Pune Year of completion :**1995** Location :**73^{0}40'00"** Latitude **18^{0}35'30"** Height :**36.0 m** Gross Capacity :**17.38** Mm^3 Spillway capacity : **933.00 m^3 /sec** Sr.No.In Large Dam Register 2009: **MH09MH1373**	14.05.2020 18.11.2020	Shri. S. D. Chopade, S.E., P.I.C., Pune	Downstream Slope Outlet Downstream Face Energy Dissipation Structure Outlet Gates	1. Wet and slushy patches are observed at ch 300 to 360 m. on downstream slopes when water level is above 626.50m. Boils were observed from ch 300 to 360 at RL 626.50 to 626.61 m (A1) 2. Leakages are observed through divide wall and outlet of LBC& RBC upto 1 to 2 cusec. (A15) 3. Mild seepage observed on d/s face	This deficiency should be kept under observation and after confirmation by competent field authority, if necessary repair should be carried out in consultation with CDO, Nashik. Leakage path should be ascertained & necessary repairs to reduce leakage should be carried out. Both rubber seals need to be changed. Necessary remedial measures should be carried out. Necessary remedial measures should be carried out. Necessary repairs should be carried out in consultation	1)The size of those observed Boils is not increasing. The portion of the dam from ch.300to 360m is kept under strict supervision. Estimates under Special repairs work will be prepared Remedial work will be carried out after getting approval. 2) Repair work for Small leakages through divide wall and outlet of LBC will be included in annual maintenance & repair programmed after approval from competent authority repair work will be carried out 3)Works for minimize wet spots

					of masonry. (A11)	with Mechanical Organization.	treatment in the dam body will be included in annual Maintenance and repair Programmed After approval from competent authority repair work will be carried out.
					4. Concrete/masonry deterioration (B8)	Necessary remedial measures should be carried out.	4)Repairs will be carried in annual maintenance
					5. The under drainage of the stilling basin (or bucket) is not satisfactory. All the open drain holes are not clear and functioning well. (A14)	Necessary remedial measures should be carried out.	5)Work of cleaning open drain holes is proposed in M&R Programmed.
					6. The surface of gates and the paints is deteriorated. (B11)	Necessary repairs should be carried out in consultation with Mechanical Organization	6) The work is completed by Mechanical wing.
4	Name :M.I.Tank **Jadhavwadi** (Gated) Tal. MavalDist.Pune Year of completion :**2001** Location :**73^{0}43'00"** Latitude **18^{0}47'00"** Height :**35.52 m** Gross Capacity :**12.03** Mm^3 Spillway capacity : **664.14.00 m^3/sec** Sr.No.In Large Dam Register 2009: **MH09HH1587**	14.05.2020 18.11.2020	Shri. S. D. Chopade, S.E., P.I.C., Pune	Spillway Outlet Gates U/s slope Crest of	1. The obstructions observed in or immediately downstream of the spillway.(A17) 2. The full length of the wire rope of the hoist is not in serviceable condition.(A18) 3. The rollers are not well lubricated.(A20) 4. The stem rods for	Necessary remedial measures should be carried out. Necessary repairs should be carried out in consultation with Mechanical Organization.	1)Repair work will be included in annual maintenance & repair programmed after Approval from competent authority repair work will be carried out Sr.no.2,3,&4 The work is completed by Mechinical Wing

				Dam U/s Face WW Bar	lifting the gates are not perfectly straight. (B5) 5. Concavity appears from ch.480 m. to 545 m. and between ch.810 m. to 980 m. on U/S slope & pitching settled down. (B3) 6. There are signs of excessive and/or uneven settlement between ch. 400 to 700 & Ch. 850 to 990.(B3) 7. Pitching settlement in between chainage 480 to 545 m and Ch 810 to 980 m.(B15) 8. Coping of spillway bar is damaged. (B7)	Necessary repairs should be carried out. in consultation with Mechanical Organization Necessary remedial measures should be carried out. Necessary remedial measures should be carried out	Sr.No.5,6,&7 Estimate Under irrigation rehabitation repair work is prepared &will be submitted to competent authority for approval .Remedial work will be carried out after getting approval from competent authority. 8) Work Planned to be taken under regular M&R during 2021-2022
5	**Name :NiraDevghar (Gated)** Tal. BhorDist.Pune Year of completion :**2007** Location :**73^{0}43'36"** Latitude **18^{0}06'18"** Height :**58.525m** Gross Capacity :**337.39** Mm^3 Spillway capacity :**1852.00 m^3 /sec** Sr.No.In Large Dam Register 2009: **MH09HH1554**	12.5.2020 28.10.2020	Shri. S. D. Chopade, S.E., P.I.C., Pune	WW Bar Gallery Outlet Body Wall General Downstream Drainage	1. There is scouring in central spillway stilling basin and concrete filling is proposed to prevent further scouring.(A7) 2. Guide wall beyond Check Weir is damaged(A16) 3. Problems of inadequate drainage - 29 Clogged porous pipes out of 48 nos.(A9) 4. The total seepage into gallery from the porous pipes in the dam on 28.10.2020 - 37.50 LPS @ (A11)	Necessary remedial measures should be carried out. Necessary remedial measures should be carried out. Necessary repair should be done.	Repair work will be included inannual Maintenance & repair programmed After approval from competent authority repair wprk will be carried out. The work is completed in 20210-21 The work is completed in 20210-21 The pours pipes are cleaned

					5 The energy dissipation arrangement is not working satisfactorily - Bed concrete is disturbed.(A14)		The work is completed in 20219-20
					6 Cumulative seepage in the body of the dam collected in gallery is measured, seepage water 35LPS@FRL	Necessary remedial measures should be carried out.	Though dam is earthen after stable stage seepage is minimized
					7 Leaching @ some extent is noticed.(A12)	Necessary remedial measures should be carried out.	Leaching material is removed from gallery
					8 The Plumb bomb, Uplift pressure cell &Piezometer pressure cells are not working.(B9)	Necessary repair should be done in consultation with IRD, Nashik.	The plumb bob ,Unlift pressure cell & Piezometer pressure cells are repaired in 2020-21
					9 The exposed drains at ch 100, 410 to 510 &ch 1000 to 1100 are working satisfactorily. In remaining chainages flow not observed.(B2)	Necessary remedial measures should be carried out.	The work is completed in 20210-21
6	**Name-Andravalley (Ungated)** Tal.Maval Dist.Pune Year of completion :**2003** Location :**73^{0}39'00"** Latitude **18^{0}20'00"** Height :**34.50m** Gross Capacity :**83.31** Mm^3 Spillway capacity :**3021.00 m^3 /sec** Sr.No.In Large Dam Register 2009: **MH09HH1622**	14.05.2020 18.11.2020	Shri. S. D. Chopade, S.E., P.I.C., Pune	Gallery	1. Foundation gallery not accessible due to flooding during inspection.(A8)	Necessary remedial measures should be carried out	1) Work of dewatering gallery is done for inspection of foundation gallery.
					2. Excessive seepage/sweating along gallery/shaft observed. (A10)	Necessary remedial measures should be carried out	2) Work of grouting for minimize seepage /sweating along the gallery will be included in annual maintenance

							and repair programmed After approval from competent authority repair work will be carried out
				Spillway Outlet Gates Outlet	3. Seepage through porous pipes, foundation drains & monolith joints collected in Gravity chamber @ D/s of EDA.(A10) 4. Significant or excessive leakage along gallery/shaft/porous drain observed.(A10) 5. Almost all porous pipes in inspection gallery are blocked.(A9) 6. Concrete / masonry deterioration (B8) 7. Significant leakage on downstream face observed. (A10) 8. Light sweating observed at foundation gallery.(A11) 9. The surface of gates and the paints is	Necessary remedial measures should be carried out Necessary remedial measures should be carried out Necessary remedial measures should be carried out in consultation with mechanical organization. Necessary remedial measures should be carried out	3) Necessary action is in progress 4)No Excessive Leakage 4)Work of cleaning porous pipes will be included in annual Maintenance and repair programmed after approval from competent authority repair work will be carried out. 6)There is no deterioration to Concrete /masonry 7)There is no significant leakage on downstream side Estimates are prepared for this work .The repair work will be included in

					deteriorated (B11) 10. Wire ropes required to be changed. (A18) 11. (1) Service gate & (2) Emergency gate - Leakages is observed through rubble seals. It requires to be changed. Electric wiring and electric motor requires to be repaired. (B5)	Necessary remedial measures should be carried out in consultation with mechanical organization	annual maintenance & repair programmed and After approval from competent authority repair work will be carried out.
(b) Executive Engineer ,Khadakwasala Irrigation Division, Pune 11							
7	Name :**Panshet** (Gated) Tal. Superintending Engineer, Pune Irrigation Project Circle, Pune							
Executive Engineer, Bhamaaskhed dam division, Pune							
10	**Name : Temghar** Tal : Mulashi Dist. Pune Year of completion : 2000 Location : Longitude: $73^0$32' Lattitude: 18^0 27' Height: 86.67m Gross Capacity: 107.96 Mm3 Spillway capacity: 626 m3/sec Sr. No. Large Dam Register 2009: MH09HH1544	13-05-20 15.9.2020	P.S.Kolhe SE, PIPC Pune Shri. Y. K. Bhadane SE DSO Nashik	Gallery /Shaft and Drainage Seepage measurement EDA Upstream slope	Wet or slushy patches are observed at some areas of dam. (A1) Safety issues - no hand rails, lighting in gallery. (A8) The seepage from VPD over flows from the steps, which makes the accessibility to gallery difficult. Foundation gallery is also not accessible due to accumulation of debris. (A9)	Suitable treat-ment should be carried out as per suggestion of Temghar Expert Committee for balance work Suitable treat-ment should be carried out as per suggestion of Temghar Expert Committee for balance work Suitable treat-ment should be carried out as per suggestion of Temghar Expert Committee for balance work	As per the recommendation of Temghar Dam Expert Committee (TDEC) leakage preventing measures are in progress. Grouting work is almost completed while upstream treatment of PFRS is in progress. The shotcrete work in monolith no. 1 to 9 is completed upto foundation level and in monolith no. 10 to 14A, it is completed upto overburden level. Thus there is substantial reduction in wet or slushy patches in the dam body. For now the repair work is adjourned sine die due expenditure incurred more than RPR. The remaining grouting and shotcreting work is proposed to complete after approval of II nd RPR from GoM which will ultimately reduce the wet and slushy patches. Lighting is done in the inspection gallery in 2019 and in foundation gallery in accessible portion and in remaining portion it will be done after dewatering of foundation gallery. The repair to staircase will be taken in hand after completion of leakage preventing measures. As per the recommendation of TDEC leakage preventing measures are in progress due to which almost 95% leakages are reduced as compared to year 2016. The inspection gallery is now accessible and foundation gallery is accessible except the some portion where debris is accumulated. Also it is expected that after completion of leakage preventing measures leakages will be within the specified limit. Cleaning of VPD, dewatering of gallery and removal

				Guide walls, Etc			of debris is included in the Temghar dam leakage preventing measures. For now the repair work is adjourned sine die due expenditure incurred more than RPR. The remaining repair work is proposed to complete after approval of IInd RPR from GoM.
				Inspection Gallery	4. The leakage from VPD is very heavy-measurement difficult. From ch 425 m to 620 m drain hole cannot be measured due to flooded gallery. Out of 378 VPD only 78 are functioning reaming 100 are slightly functioning & 200 VPD does not exist (A 9)	Suitable treat-ment should be carried out as per suggestion of Temghar Expert Committee for balance work	As per the recommendation of TDEC leakage preventing measures are in progress. It is observed that due to work done in season 2017-18, 2018-19 & 2019-20 almost 95% leakages are reduced. It is expected that after completion of repair work the leakages will be within the specified limit. Dewatering of gallery, removal of debris and Cleaning VPDs by redrilling is included in the Temghar dam leakage preventing measures. In the portion where VPD does not exist, the proposal of drilling new VPDs is included in IInd RPR of Temghar dam. For now the repair work is adjourned sine die due expenditure incurred more than RPR. The remaining repair work is proposed to complete after approval of IInd RPR from GoM.
					Excessive seepage observed in gallery, Gallery is flooded from RL 425 m to 715 m. (A 10)	Suitable treat-ment should be carried out as per suggestion of Temghar Expert Committee for balance work	As per the recommendation of TDEC leakage preventing measures are in progress. uptill now 80% grouting & 40% shotcrete work is completed due to which 95% leakages are reduced as compared to 2016. After the Shotcrete work is completed, entry of water from upstream portion will be restricted which will reduce the seepage in gallery. Dewatering of gallery and removal of debris is included in the Temghar dam leakage preventing measures. For now the repair work is adjourned sine die due expenditure incurred more than RPR. The remaining repair work is proposed to complete after approval of

							IInd RPR from GoM.
					6. There observed the leachate deposition in gallery. (A 12)	Suitable treat-ment should be carried out as per suggestion of Temghar Expert Committee for balance work	Most of the leaching observed existed before rehabilitation work, hence to reduce the leaching in dam body/gallery fly ash and silica is added in mix design of grouting which is given by CWPRS, Pune. The leaching will reduced after the completion of leakage treatment work. Also, the new leaching which is observed every year gets tested form MERI Nashik.
					7. There observed the leachate deposition in gallery. (A 12)	Necessary repair should be carried out.	Most of the leaching observed existed before rehabilitation work, hence to reduce the leaching in dam body/gallery fly ash and silica is added in mix design of grouting which is given by CWPRS, Pune. The leaching will reduced after the completion of leakage treatment work. Also, the new leaching which is observed every year gets tested form MERI Nashik .
				Stilling basin	8. Out of 378 VPDs, only 78 are functioning, remaining 100 are slightly functioning & 200 VPDs does not exist. (A9)	Necessary repair should be carried out	The cleaning of existing VPD by redrilling is in progress. In the portion where VPD does not exist, the proposal of drilling new VPDs is included in IInd RPR of Temghar dam. After getting the approval from government the work will be taken in hand.
					9. Seepage increases with the increase in water level. (A11)	Necessary repair should be carried out	As per the recommendations of TDEC leakage preventing measures are in progress. The leakage observed at various levels is recorded and graph is plotted which shows considable reduction in leakage compared to previous years at same level.
				Instruments	10. All the open drain holes are blocked and hence the tail pond always remains flooded. (A9)	Necessary repair should be carried out	Cleaning of tail pond is done in June 2018. Cleaning of drain holes and dewatering of tail pond will be done along with Dam strengthening works after completion of leakage preventing measures.

					11. 58 drain holes are not in working & 94 drain holes are not inspected as gallery is flooded. Porous pipes are chocked. Drilling is started (A9) 12. D/S side wall of D. S. S. gate seems to be damaged & Gate of ICPO: Manual operation of stem rod seems to be heavy, bearings are damaged & leakages are observed. (B5) 13. Concavity of depth 1.5m - 2m is observed on the upstream side of dam at monolith 12, Ch.415 to 430m. (B 3) 14. There is foundation erosion or scour noticed. 15. Foundation gallery was flooded from ch 425 to ch 705 (Flow measured = 159.3 lps). Hence could not be inspected. The leakages measured at the time of inspection in monolith no. 14= 14.3 lps, Monolith No. 20 = 28.2 lps, Monolith No. 18-19 =7 lps. (A8). 16. Leakages observed at some chainages in inspection gallery. (A10)	Necessary repair should be carried out Necessary repair should be carried out	The cleaning of drain holes will be carried out after dewatering and removal of debris in the gallery. Cleaning VPDs by redrilling is included in the Temghar dam leakage preventing measures and will be completed after getting the approval to RPR from GoM. Work is carried out through mechanical Division. Instead of manual operation of Stem Rod it is now operated electrically and it is working smoothly. Bearings are also changed. Shotcrete work in this portion was done in season 2019-20 The repair works of the foundation will be carried out along with the dam strengthening work after completion of leakage preventing measures. The seepage observed in gallery will be reduced after completion of leakage prevention measures. Once the shotcrete work is completed, entry of water from upstream portion will be restricted which will reduce the seepage in gallery. Maximum leakage observed was 2587 lps in year 2015-16. Due to work done in working season 2017-18, 2018-19, 2019-20, around 95% leakages are reduced. Leakages reduced from 2587 Lps to 173.1 Lps at same level in the year2020-21. The leakage in the inspection gallery has only been observed in areas where shotcreting has not been done. These leakages will be reduced after completion of leakage preventing measures. Once the shotcrete work is completed, entry of water from upstream portion will be

							restricted which will reduced the seepage in gallery.
					17. Leaching from gallery at some chainage is observed. (A12)	Necessary repair should be carried out	Most of the leaching observed existed before rehabilitation work, hence to reduce the leaching in dam body/gallery fly ash and silica is added in mix design of grouting which is given by CWPRS, Pune. The leaching will reduced after the completion of leakage treatment work. Also, the new leaching which is observed every year gets tested form MERI Nashik.
					18. The leakage observed at the junction of OF and NOF section. (A10) (A11)	Necessary repair should be carried out	This leakage is observed at the Spray wall portion. The grouting and shotcreting work in spillway portion could not be done due to incomplete bridge construction. Now as the bridge is completed the grouting work in this portion will be completed. Also the shotcrete in monolith no. 10 to 14A is completed upto overburden level due to gorge. After getting the approval for IInd RPR from GoM the grouting and shotcrete in this portion will be completed which will ultimately reduce the leakage at the junction of OF and NOF section.
					19. Due to standing water in stilling basin it could not be inspected. Also leakage through guide wall observed.(A 14) 20. Sweating observed on d/s face indicates VPD cleaning is required for monolith displaying sweating. Cracks and vegetation was observed on downstream side of spillway. (A11)	Necessary repair should be carried out	Cleaning of stilling basin is done in june 2018. The repair of the guide wall will be carried out along with the strengthening work after completion of leakage preventing measures. The cleaning of VPD by redrilling is included in IInd RPR of Temghar dam. After getting the approval from government the work will be taken in hand. Vegetation that come to the dam downstream side are cleaned from time to time. Dam safety instruments will be installed after the completion of leakage

					21. Dam safety instrument are not installed on dam site. (B 9)		prevention works. The cost of the dam safety instrument is included in IInd RPR. After the approval of IInd RPR from government, this work will be done.

Shirala Dist.Sangali Year of completion : **1984** Location : Longitude **74^{0}06'30"** Latitude **16^{0}59'20"** Height :**31.20 m** Gross Capacity : 21.18 **Mm^3** Sr.No.In Large Dam Register 2009: **MH09HH1101**	16.07.2020 07.11.2020	Shri H.V.Gunale S.E.SIC Sangali	Outlet	1. Hoist mechanisms is faulty & Emergency gate mechanisms is faulty (B5)	It should be repaired properly in consultation Mechanical organization.	Gate repair and ancillary works are included in the non irrigation procurement list 2021-22 of the mechanical department.
(b) **Executive Engineer ,Takari Pump House Division No.1, Devrashtre**							
19	Name :**Satpewadi barrage** **T**al. Walwa Dist.Sangali Year of completion : 2005 Location : Longitude Latitude Height : 25**.50 m** Gross Capacity : 3.886 **Mm^3** **Proposed for updation in NRLD 2018**	16.07.2020 08.11.2020 21.01.2021	Shri H.V. Gunale S.E.SIC Sangali Shri Y K Bhadane SE DSO Nashik	Abutment Contacts	1. Due to River Flood in Aug.2019 both side slope pitching near abutment Eroded and embankment washed out (B15)	It should be repaired properly	In Progress Not attached .Proposal of Pitching and embankment restoration was sent to District Collector, Sangli for approval but it is not sanctioned yet.Amount Required for this work is about Rs.450 Lacks Completed
					2. Deck slab of slot no. 12 is damaged and some reinforcements are exposed. (B14)	It should be repaired properly	

(3) Superintending Engineer, Kolhapur Irrigation Circle, Kolhapur							
(a) Executive Engineer, Kolhapur Irrigation Division (North), Kolhapur.							
20	Name: **Kadavi** Tal.Shahuwadi Dist. Kolhapur Year of completion : 2000 Location : Longitude 73°52'30" Latitude 17°00'05" Height : 36.05**m** Gross Capacity : 71.34 **Mm^3** Sr.No.In Large Dam Register 2009: **MH09HH1541**	20.05.2020 16.11.2020	Shri M. S. Surve SE, KIC Kolhapur	W.W. Bar	1. Waste wier bar work still not completed by construction wing (B7)	It should be completed.	1)Waste wear bar is 100% completed Chute Portion from Ch.20 to ch.146m Stilling basin from Ch.146 to 162m & End weir from ch.162 to 186m with side linin on both sides of entire portion is proposed on D/S of bar .Out of which only chute portion from ch.20to 122m is executed. Remaining part of Chute portion from Ch.122 to 12 m& End wear from ch.162 to 166m with side lining on both sides of entire portion is not executed. 2)Good quality hard rock is available at down stream of ww bar Waste wear is functioning since year 2004 inspite of this exposed rock in non executed par of chute portion stilling basin & end wear is not disintegrated. Hence necessary to construct remaining work of stilling basin & end weir.
21.	Name- Radhanagari (Gated) Tal.Radhanagari Dist- Kolhapur Year of completion : 1954 Location : Longitude 73°57'40" Latitude 16°020'20"	08.05.2020 16.11.2020	Shri M. S. Surve SE, KIC Kolhapur	D/S Face EDA	1. Concrete/masonry deterioration (spalling, leaching, disintegration**(A10)** 2. Significant leakage at Ch420to480m&Ch640to715m on downstream face .(A10)	It should be repaired properly Proper remedial measures shall be taken to reduce leakage.	Necessary repair work of grouting will be done after proper consultation of DRIP Phase-II Necessary repair work of grouting will be done after proper consultation of DRIP

	Height : 42.83**m** Gross Capacity : 936.56**Mm^3** Sr.No.In Large Dam Register 2009: **MH09HH0067**			Spillway	3. Scouring at all the gates obstruction of penstock in sluice of 5**(A14)**	After rechecking of deficiency by competent field authority, Necessary repairs should be carried out in consultation with CDO Nashik.	Phase-II Necessary repair work will be carried out after proper consultation of CDO.
					4. Condition of energy dissipation arrangement is not satisfactory(A14)	It should be repaired properly	Necessary repair work will be carried out after proper consultation of CDO.
					5. Chains/ wire ropes Required to replace heavy rusted channels rusted need to repairs**(A18)**	It should be repaired properly consultation Mechanical organization	Necessary repair work will be carried out in 2022-23 It should be repaired properly by Mechanical organization in 2022-23
				Hoists	6. There is the mechanical or structural components and fastners or seals subjected to excessive wear (A20)	It should be repaired properly consultation Mechanical organization	
				Outlet			It should be repaired properly by Mechanical organization in 2022-23
		20.01.2021	Test Inspected by Shri Y K Bhadane SE DSO Nashik		7. There is problems with the rollers (A20) 8. Seal angle is damaged (A20) 9. Fulrum pin & lock plate nuts rusted required to replace(A20) 10. Gantry (Gliate with trusses to be repaied or replaced (A20)	It should be repaired properly consultation Mechanical organization	Work Completed Out of 3 service gate 1 gate (Gate no.3) repaired properly by Mechanical org.in.2021-22
					11. Due to wire rope		Necessary repairs work

					hoist service gate cannot be loaded @ FSL (A20)	It should be repaired properly consultation Mechanical organization	will be carried out in 2022-23
					12 The rubber seals required to be replaced (B12)		Leakage has been measured by V Notch and maintained the record.
					13 Leakage and leaching was observed on downstream side of dam near power outlet @ Ch 701.4m. Heavy leakage was observed through joint of buttress and dam masonry at Ch 450m. Leakage should be measured daily and kept under observation. Record of the leakage should be maintained. (A11)	Leakage should be measured daily and kept under observation. Record of the leakage should be maintained.	Necessary repair work will be carried out in 2022-23
					14 Leakage through spillway masonry was observed. Pointing of spillway masonry was damaged.. (B7)	Pointing should be repaired. Necessary remedial measures should be done to stop the leakage	New Concrete Divide wal constructed in20210-21 Work Compleed
					15 Divide wall masonry was heavily damaged. Stones of masonry were collapsed.(A16)	The divide wall masonry should be repaired	Work Completed in 2020-21
					16 Left side guide wall was broken.(A16)	It should be restored.

Part-3

Dam Health Status Report of Pre & Post Monsoon 2021

Part-3: Dam Health Status Report of Pre & Post Monsoon 2021

3.1 General:

Dam Safety Division No. 1 under Dam Safety Organization, Nashik excersies compilation of Annual Pre & Post Inspection Reports of Dams submitted by Field Offices as well as Test Inspection Reports of Selected Dams carried out by Dam Safety Organization, Nashik in the form of Annual Dam Health Status Report (ADHSR).

3.2 Inspection Reports submitted by Field Offices:

In all there are 262 Government owned Dams & 17 Private owned Dams are monitored by Dam Safety Organization, Nashik from safety point of view.

262 Government owned Dams constitute 69 Class-I & 193 Class-II Dams. 17 Private owned Dams constitute 7 Class-I & 10 Class-II Dams.

Government owned Dams: Out of 262 Dams, Pre Monsoon Reports were received from 259 Dams. However, out of 262 Dams, Post Monsoon Reports were received from 229 Dams. 36 Dams Reports were not received in DSO. [Ref. Table 3.1 & 3.2]

3.3 Test Dam Inspection by Dam Safety Organisation:

Test Inspection Programme for Test Inspection of selected Dams is approved by Director General, DTHRS, MERI, Nashik.

As per approved Annual Test Dam Inspection Programme, Class-I Dams are inspected by SE, DSO along with EE, DSD-1& Class-II Dams are inspected by EE, DSD-1, Nashik.

On similar lines in case of Private owned Dams, full fledged inspection of Class-I Dam is carried out by SE, DSO along with EE,DSD-1& Class-II Dam is carried out by EE, DSD-1, Nashik.

Government owned Dams : Despite of Covid-19 pandemic (6 out of 8 Class-I, 19 out of 19 Class-II & 1 century old Class-III (Bhadalwadi) as proposed for test inspection were inspected by team of Dam Safety Organization, Nashik. [Ref. Table 3.5]

Private owned Dams : Post Monsoon Inspections for 14 Dams were carried out by DSO. [Ref. Table 3.3 & 3.4]

Following team of officers have inspected targeted Dams in Pune Region

1) Shri M.S.Amale,Superintending Engineer, Dam Safety Organization, Nashik

2) Shri U.T.Murkute, Executive Engineer, Dam Safety Division No.1, Nashik

3) Shri V.Z.Nemade, Sub Divisional Officer, Dam Safety Division No.1, Nashik

4) Shri. H.P.Deokate, Junior Engineer, Dam Safety Division No.1,Nashik

5) Shri. R.R.Salunkhe, Assistant Engineer-II, Dam Safety Division No.1, Nashik

And Following team of officers have taken efforts to prepare this report.

1) Shri M.S.Amale,SuperintendingEngineer Dam Safety Organization, Nashik

2) Shri U.T.Murkute, Executive Engineer, Dam Safety Division No.1, Nashik

3) Shri R.A.Pawar, Sub Divisional Officer, Dam Safety Division No.1, Nashik

4) Shri M.R.Rasal, Sub Divisional Officer, Dam Safety Division No.1, Nashik

5) Shri P.N.Pawar, Sub Divisional Officer, Dam Safety Division No.1, Nashik

6) Shri V.Z.Nemade, Sub Divisional Officer, Dam Safety Division No.1, Nashik

7) Shri. H.P.Deokate, Junior Engineer, Dam Safety Division No.1, Nashik

8) Shri. R.R.Salunkhe, Assistant Engineer-II, Dam Safety Division No.1, Nashik

3.4 Health Status of Class-I & Class-II Dams (Government & Private Owned)

This report excerpts details of Deficiencies received from Pre & Post Monsoon Inspections Reports based on detailed inspections carried out by concerned field Superintending Engineer for Class-I Dams & Executive Engineer for Class-II Dams.

And it also covers Test Inspection carried out by team of officers from Dam Safety Organization, Nashik.

Sr. No.	Category	Total Dams		Reports received in DSO				Cat 1				Cat 2				Cat 3			
	Class	I	II	I		II		I		II		I		II		I		II	
	No. of			Pre	post	Pre	post	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency	Dam	Deficiency
1	WRD	69	193	69	65	190	164	0	0	0	0	65	469	111	187	69	996	191	1645
2	Private	7	10	0	4	4	5	0	0	0	0	4	5	7	17	4	18	10	62
	Total	76	293	69	69	194	169	0	0	0	0	69	474	118	204	73	1014	201	1707

3.5 A Graphical Representation of Deficiencies attended, Submission of Pre/Post Monsoon Reports, Category wise Deficiencies, Class wise of Deficiencies is appended in Annexure I.

3.6 Selected Snapshots of DSO Test Inspection Test Inspections are compiled in Annexure II.

3.7 Conclusions :

3.7.1 Frequent Deficiencies Class-I Dams

a) **B9:** Instruments not in working condition. (48 Dams)
b) **B 5:** Outlet gates not functioning properly. Stem rod is bent (Service gate / Emergency gate/Stop log gate/sluice gate) (20 Dams)
c) **A 14:** EDA / Stilling basin damaged/Hydraulic performance not good.(18 Dams)
d) **A 11:** Sweating / seepages through D/S of masonry dam Leakage /Seepage through dam body. (22 Dams)
e) **A 10 :** Heavy leakages through porous pipes/ through dam body in gallery or monolith joints (16)

3.7.2 Frequent Deficiencies Class-II Dams

a) **B 5:** Outlet gates not functioning properly. Stem rod is bent(Service gate/Emergency gate/Stop log gate/sluice gate). (55 Dams)
b) **B7:**Waste weir/waste weir bar not in good condition/coping damaged/leakage through waste weir.W.W. Bar is damaged / Coping of w.w. Bar damaged. (20 dams)
c) **A6:** Outlet well is damaged/not in good condition /cracks observed/jets of water in well. (18 dams)
d) **A 2**: Standing pool / Ponding / Water Logging / Slushy condition on D/S of Dam (17 Dams)
e) **B 1** Dam section is not as per design.(19 Dams)

3.8 Points of Attention :

1) This overview provides condensed summary of deficiencies noticed in the Pre & Post Monsoon Inspection Reports Received in DSO & also during test inspection conducted by DSO Officials. Field Officers / Owners of the Dams are required to pay attention to Deficiencies pointed out in ADHSR to maintain Dams in Safe condition.

2) The Chief Engineers are requested to flag this issue and compel all Superintending Engineer & Executive Engineer of concerned Dams to carry out periodic inspections and submit report to D.S.O. in time.

1	2	3	4	5	6	7
	Gross capacity **1.81 Mcum** Sr.No.In Large Dam Register **MH09MH1230**				leakages were observed.(B7) 3. Big trees, heavy vegetation are seen on d/s of ww bar in tail channel.(B2)	records of leakage with respect to water levels in reservoir should be maintained. Vegetation should be removed for free flow of water for disposal of water through tail channel without any obstruction
4	Name : **New Shivsagar** Tal. **Mawal** Dist. **Pune** Proposed for updation in NRLD 2018	26.8.2021	Inspected by EE DSD 1 Nashik	Masonry Section Embankment	1. leakages were observed through masonry section @ chainages 117m to 123m (A11) 2.Heavy Vegetation, bushes are observed@ 0m to120m on d/s of dam. Drains are not observed due to vegetation.(B2) 3. Water jets are observed in the junction of overflow & non overflow section of masonry dam.(A15) 4. Heavy leakages were observed @205m &.210m.Also minor leakages were observed at some places. Vertical porous drains in inspection gallery shows heavy leakages even after grouting of the masonry dam as informed by field officials. (A10)	Leakage should be quantified and records of leakage with respect to water level in reservoir should be maintained. Vegetation and bushes should be removed for free flow of water and proper inspection of side slope of dam. Leakages through the mentioned junction are observed for varying levels of reservoir & record of the same should be maintained. Leakage should be quantified and records of leakage with respect to water level in reservoir should be maintained. Leakages through VPD pipes are observed for varying levels of reservoir & record of the same should be maintained.

Sr. No	Dam Features	Date of Inspection	Inspecting Officer	Main Component of Dam	Significant Deficiencies Noticed	Remedial Measures Suggested
1	2	3	4	5	6	7
(3)	**Symbiosis,Lavale,Pune**					
5	Name : **Upper Tank** Tal. **Mulashi** Dist. **Pune** Date of completion: Location: Longitude- 73°43'39″ Latitude 18°32'04 Height :**15.00 m** Gross capacity **2.1694 Mcum** Sr.No.In Large Dam Register	27.8.2021	EE DSD1 Nashik		1. Waste Weir bar is not provided resulting in tail channel forming gutter.(B7) 2. Toe drain of upper tank is submerged due to water of lower tank. Hydraulic study of Upper tank & Lower tank should be carried out in order to prevent submergence of toe drain of upper tank. Cross drains and longitudinal drains are not visible due to vegetation.(B2) 3. Tail Channel erosion is observed. Heavy vegetation is observed in tail channel. Also tail channel get contracted towards lower tank. Erosio of earthen dam due to tail channel towards the d/s of upper tank is in progress.(A7)	Construct WW Bar to maintain reservoir level at FRL. Vegetation and bushes must be uprooted before they will grow into trees endangering the safety of earthen embankment. Vegetation should be removed for free flow of drains and also for proper inspection of the same. Approved Design note & Drawings shall be submitted to CDO/DSO, Nashik for study & suggesting proper remedial measures. To avoid further erosion, construct cross bar in tail channel wherever drastic change in slope. Also vegetation is removed for free flow of water in tail channel. Protection wall from dam side should be constructed in order to prevent the erosion of earthen dam in future.

Sr. No	Dam Features	Date of Inspection	Inspecting Officer	Main Component of Dam	Significant Deficiencies Noticed	Remedial Measures Suggested
1	2	3	4	5	6	7
6	Name : **Lower Tank** Tal. **Mulashi** Dist. **Pune** Date of completion: Location: Longitude- 73°43'39″ Latitude 18°32'04 Height :**15.00 m** Gross capacity **2.1694 Mcum** Sr.No.In Large Dam Register	27.8.2021	EE DSD1 Nashik		1. Sagging noticed on the upstream face.(B3) 2. Drains are not observed due to heavy vegetation. According to the approved drawings of lower tank & field officials information, on the berm of lower tank,a road was prepared, and while constructing the road the toe drain of lower tank get overburden due to soil/Muruum.(B2) 3. Waste Weir bar is damaged.(B7) 4. It seems that water way is contracted due to construction of pipe culvert, It seems that on the downstream of second pipe culvert there may be erosion of d/s berm toe.	There should be closed observations on the sagged portion of embankment to notice distresses if any. Vegetation should be removed for inspection of side slope of dam. Approved design note & drawings shall be submitted to DSO for study & suggesting proper remedial measures. WW bar should be reconstructed as per design. Verify and communicate to DSO Nashik that whether pipe openings are sufficient to pass the design discharge of spillway to suggest remedial measures. Protection wall for d/s berm is necessary to avoid erosion of toe

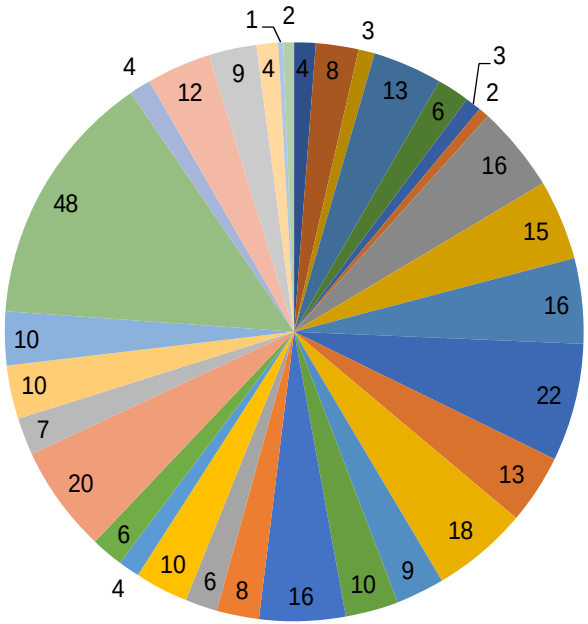
5.Category wise Deficiencies Class 1 Dam



- A.1: Boil leakage/ seepage/ wet patches/ slushiness, in Earthen Dam.
- A 2: Standing pool / Ponding / Water Logging / Slushy condition on D/S of Dam
- A 3 : Leakages in vicinity of junction between earthen dam & masonry dam portion.
- A 4: Major leakages through outlet conduit/ pipe joints / Gates.
- A 5: Relief wells not functioning properly./ Abnormal rise in water level in wells.
- A 6: Outlet well is damaged/not in good condition /cracks observed/jets of water in well.
- A 7: Retrogression /scouring in tail channel.
- A 8: Drainage gallery inaccessible/No adequate lighting./ No dewatering arrangement or failure.
- A 9: Foundation drains / holes/ porous pipes/chocked/ no seepage through foundation drain holes.
- A 10: Heavy leakages through porous pipes/ through dam body in gallery /monolith joints.
- A 11 : Sweating / seepages through D/S of masonry dam
- A 12: Excessive considerable leaching from seepage water.
- A 13: Swelling / minor cracking observed on body of dam.
- A 14: EDA / Stilling basin damaged/Hydraulic performance not good.
- A 15: Leakages through spillway /piers//junction of flank wall.
- A 16: Damages / foundation erosion/ scour/undermining observed in vicinity of flank walls/ guide walls/ junction walls/return walls.
- A 17 :End weir not in good condition / scouring noticed on immediate D/S.
- A 18: Wire ropes of hoist not in good condition / hoisting structure damaged / cracked.
- A 19: Alternative power system Generator for gate operation not working properly.
- A 20: Operation of gates not smooth needs repair.
- B 2: Cross and toe drains not working properly/ drains silted or vegetated causing stagnant pool of water.
- B 3: Considerable settlement of embankment / Rock toe/Pitching/ U/S & D/S slops, bulging/concavity of slopes.
- B 4: Longitudinal / Transverse cracks/ low area/sink holes/gully formation on top side slope of earthen dam.
- B 5: Outlet gates not functioning properly. Stem rod is bent(Service gate/Emergency gate/Stop log gate/sluice gate)
- B 6: Approach to dam through all weather road not constructed/maintained properly.
- B 7: Waste weir/waste weir bar not in good condition/coping damaged/leakage through waste weir.
- B 8: Pointing on U/S face of dam not in good condition./deterioration spalling of concrete surface.
- B 9: Instruments not in working condition.
- B 10: Leakages through River sluice.
- B 11: Surface paint/steel surface of spillway gates deteriorated.
- B 12: Damage to Rubber seals/ considerable Leakages through gates.
- B 13: Heavy vegetation/big trees on embankment top/slope making dam portion not accessible.
- B 14: Deck bridge slab/ pier / damaged cracked/ alignment disturbed.
- B 15: Major portion of Pitching damaged/washed away.

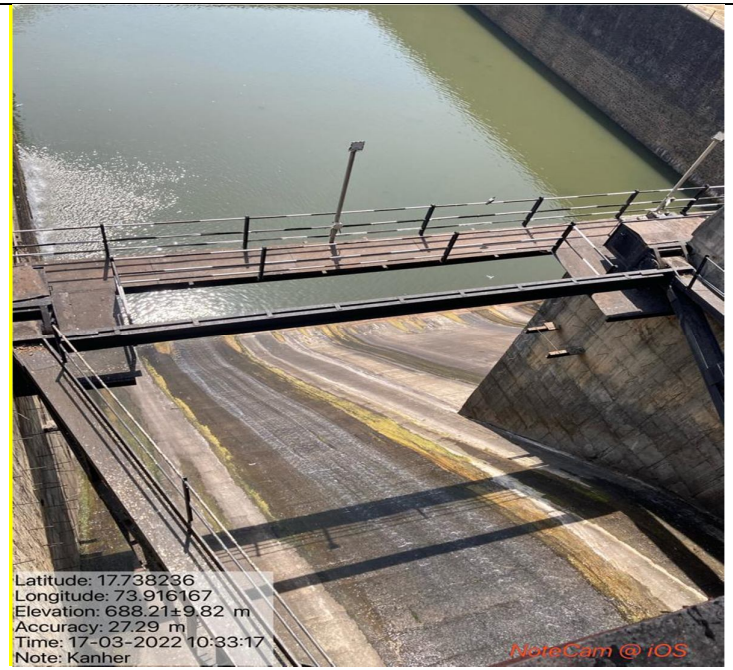
Snapshots of Dams Inspected by DSO



Snapshot-1

Kanher Dam (Class-I)

Taluka –Satara **Dist**- Satara
Date of Inspection – 17.3.2022
Minor leakages from Radial Gate No.1 is observed.

Snapshot-2

Vadaj Dam (Class-I)

Taluka – Junnar **Dist**- Pune
Date of Inspection – 18.3.2022
To the immediate left side of non overflow section (NOF) it shows heavy leakages, record of the same is maintained by field officials with respect to dam reservoir level.

Snapshot – 3

Otur Waghdara Dam (Class-II)
Taluka – Junnar **Dist**-Pune
Date of Inspection – 22.10.2021
Leakages are observed on d/s side of the dam. Also water Ponding is observed on the d/s of dam

Snapshot -4

Shetphal Dam (Class-II)
Taluka – Indapur **Dist**-Pune
Date of Inspection – 30.1.2022
Earthen section seems to be under section in certain portion. At some places Gully formation and cuts are observed due to trespassers

Part-4

Annual Performance Report of Dam Instruments

Part-4: Annual Performance Report of Dam Instruments

4.1 General:

The main purpose of instrumentation in dam is to warn of any changes that could in danger the safety of a dam, as well as to provide a confirmatory check in design assumptions and methods of computation.

Instruments embedded in or installed at the surface of the dam keeps a constant watch over the performance and indicate the distress spots for which remedial measures may be taken. Thus, instruments play an important role in monitoring and evaluating the performance of the dams during the construction as well as operation.

In general it is observed that Dam Instrumentation is somewhat neglected part in Dam maintenance. Instruments are installed in or on the Dam Body. However due to poor Maintenance they are not functioning. It is must for field officers to recognize importance of data derived from instruments and its analysis to upkeep of Dams in safe condition.

4.2 Instrumentation in Earthen Dams :

1. Pore Pressure Meter :

They are installed in bore holes drilled below the foundation or through already completed embankment. Hence cannot be repaired or replaced.

2.Casagrande /Standpipe Piezometers :

These are used for measuring pore water pressure in soil. These instruments can be installed at any time at desired location after completion of construction of the dam.

3. Twin Tube Piezometers :

These are also used for measuring pore water pressure in earthen dam. These are installed in foundation and embankment during construction of dam. If PVC pipes are found chocked due to leached material then it can be cleaned with CuSo4. If pipes are cut / broken then it cannot be replaced as those are in body of dam. Outside measuring assembly can be repaired. Periodical maintenance, reading and calibration are of utmost important.

4. Earth Pressure Cells :

These are installed in the foundation. The cables which are outside the body can be replaced if damaged. The sensor cannot be repaired or replaced.

5. Settlement Gauges (Surface Settlement Gauges/Vertical Cross Arms) :

These are used for measuring settlement in earth fill dam, rock fill dam and high embankment. Initially when the dam is under construction these instruments are installed.

Settlement of dam is more in initial period, which gradually decreases and it is almost nil after certain period. As such these gauges also do not show settlement after few years.

6. Slope Indicator :

This is installed in foundation with one end at bottom and other at top of the dam.It measures horizontal and vertical movement of the dam. This can be replaced.

4.3 Instrumentation in Concrete / Masonry Dams :

1. Stress meters :

The stress meters measure stresses inside the dam body. These instruments are embedded in concrete/masonry during construction stage hence cannot be repaired or replaced.

2. Strain Meter/ No Stress Strain Meter :

The strain meters measures the deformation in the structure at the particular location due to strain, creep, temperature etc. The main purpose is to determine the stress distribution in the concrete dam during and after construction of dam. Since instrument is installed in the body of the dam it cannot be repaired or replaced.

3.Uplift pressure cells

The bowl type uplift pressure cells are provided in the foundation of dam. Uplift pressure cell is used for monitoring uplift pressure of water in the foundation of dam and concrete structure. The pressure cell pipes can be cleaned if choked. The pressure gauges can be repaired or replaced.

4. Plumb Bob /Co-Ordimeter :

Conventional / Inverted Plumb Bob is used to measure deflection of the dam body. It measures the horizontal displacement in dam's foundation and abutment. Plumb bob can be repaired or replaced.

5. Thermocouples/ Thermometers :

These are used to measure the temperature variations in the body of concrete dam. These are installed in layers at various levels and can not be replaced or repaired after construction.

6. Long Gauge Extensometer :

It is used to measure the deformation/displacement in the foundation of the concrete dam. Once it fails to function can not be repaired.

7. Joint meters :

The joint meters measure the opening of the joints across which they are embedded. As such they are located near the joints.

4.4 Status Of Dam Instrumentation In The Region :

Considering the fact that most of the instruments were non-functional from many years, Govt. of Maharashtra appointed a committee to study these instruments. The recommendations of the committee were accepted and incorporated in G.R. धसुसं २०१४(६२१/१४)/ सिं.व्य. (कामे) Dated. 31/12/2015. Accordingly to every dam owner, it is informed by Dam Safety Organization to update the list of instruments at the dam site. In this report the updated details of instruments are considered.

The status of dam instrumentation in the Pune region is given in table No.4.1. Similarly the details of mortality of instruments is given in table No.4.2 and comparison of mortality rate with respect to previous year is given in table no. 4.3

4.5 Observations

1) Various instruments numbering 1571 have been installed on these 27dams. Out of which 198 were working and 1373 were not working i.e. 87.39 % instruments are in non-working condition.
2) In the Pune Region instrument data reading are available from Koyna, Kolkewadi for Instrumentation data analysis report.
3) The observations of the instruments should be taken regularly and need to be sent to D.S.O. Nashik for analysis.
4) Comparison of mortality rate of instrument as compared to last year is given as per table No.3.3.

Table No. 4.1
Dam wise Status of Dam Instruments Installed on Large Dams
(Pune Region)

Part-5

Annual Performance Report of Meteorological Instruments

Part- 5 : Annual Performance Report of Meteorological Instruments

5.1 General :

Hazard potential of dam depends upon the possible hazard it poses to population on the downstream during flood. In case of gated spillways, generally flood is considered to impinge when reservoir is at F.R.L. If flood forecasting and warning systems are in place, flood impingement can be considered at lower when F.R.L. considering prior depletion.

The establishment of hydro-meteorological stations in the vicinity of every Class-I dam and rain gauge network in its catchments assumes vital importance due to its role in flood forecasting and warning. The hydro-meteorological station shall be capable of recording data relating to, among other parameters, rainfall, atmospheric pressure, maximum & minimum temperature and humidity, wind speed, wind direction, height of waves and reservoir water temperature. It is important that a representative proportion of the rain gauge network is linked to flood forecasting and warning control center by telemetry.

5.2 Observations :

From Pre/Post Monsoon Reports it is seen that the ANNEXURE-IV which is "**Checklist of Various Meteorological Instruments installed on Dams**" is not filled properly and quantity of number of instruments varies from year to year. As this status of instruments is submitted to C.W.C., New Delhi. Field authorities need to make sure that correct information is filled. Table 4.1 gives thedamwise status of the meteorological instruments, and Table 4.2 gives the status of morality of meteorological instruments installed in the region.

1. As per Pre/Post Monsoon reports of Pune region it is seen that 178 various meteorological instruments installed on dams out of which 150 are functioning and 28 are non functioning. The non-functioning should be repaired/replaced on priority.
2. As per the government circular CDA-1013/(207/13)/CAD(works)/ August-2013. It is mandatory to install **Pan Evaporimeter** to measure evaporation on all major and medium projects.

Efforts should be taken by field officers to establish automatic flood warning systems which will help in saving lives, livestock and property and will invariantly contribute to lessening of the overall impact of floods.

Table - 5.1

Status of Dam Meteorological instrumentation

(Pune region)

Sr. No.	Name of Dam	Name of instruments	No. of instru-ments	Performance		Status of Data Analysis
				Working	Not Working

Part-6

National Committee on Dam Safety (NCDS) Documents

Part-6 National Committee on Dam Safety (NCDS) Documents

Importance of National Committee on Dam Safety (NCDS) Documents:

Central Water Commission (CWC) has laid down various guidelines covering the standardized dam safety practices-essentially guiding the dam owners in preparation of Emergency Action Plans, Periodical Dam Safety inspections, comprehensive dam Safety evaluation and appropriate institutional framework for dam safety. Their implementation is emphasized during the meetings of National Committee on Dam Safety (NCDS) and through the communications sent in this regard.

During the 34th meeting held at Chennai in March 2015 it was requested to all the Dam owners to take necessary steps for preparation of EAPs & other documents & report to NCDS Secretariat about the number of Dams for which EAPs & other documents have been prepared, along with the target dates for the preparation of EAPs & other documents for the remaining Dams.

The documents to be prepared as per National Committee on Dam Safety are as under & these shall be properly maintained and kept up to date by including latest information available.

1. EAP

2. R.O.S & G.O.S.

3. Data Book

4. O & M manual

5. Record Drawing & Completion Report,

1. EAP : Emergency Action Plan:

An Emergency action plan is a formal plan that identifies potential emergency conditions at a dam prescribes the procedures to be followed to minimize property damage and loss of life. The EAP contains procedures and information to assist the dam owner in taking necessary actions in time to moderate or alleviate the problems, in addition to issuing early warning & notification messages to responsible emergency management

authorities,viz.,DistrictMagistrate/Collector, Armed Forces, Paramilitary forces, Project Authorities & other Central/State Agencies. It also contains inundation maps to show the emergency management authorities of the critical areas for necessary relief and rescue actions in case of an emergency. In a nutshell, it outlines “who does, what, where, when and how” in an emergency situation or unusual occurrence affecting the Dams.The Emergency Action Plan has to be prepared as per CWC Guidelines are available on official website-

https://damsafety.in/ecm-includes/PDFs/Guidelines_Developing_EAP_Dam.pdf

2. R.O.S. (Reservoir operation schedule) & G.O.S. (Gate operation schedule) :

It is very necessary to lay down operating procedures of all storage reservoirs with the objective to limit the flood stages in the river downstream and with maximum feasible utilization of the flood capacity of the river channel downstream of reservoirs, consistent with the safety of the dam. A proper reservoir operation schedule should be in place.

For this purpose a schedule of opening and closing the gates to limit the reservoir levels to preset gauges should be laid down. Schedule for the dam as per operation & maintenance manual should be strictly adhered. The entire capacity of reservoir is used for active conservation. When the reservoir rises above active conservation, operation will be in accordance with the standing operation procedures. Inflow forecasting arrangement should be made for easy operation of gates. The Engineer in charge should inform immediately to the flood maintenance engineer downstream and flood –fighting center of the releases from the reservoir.

3. Data book:

Proper assessment of dam safety involves a thorough review of design, construction and performance records prior to conducting a field examination. The Data Book is an unpublished document which is prepared before the initial safety inspection of each dam. This book is abbreviated, convenient source of information, summarizing all pertinent records and history related to the safety of a dam and is a reference for the evaluation team. This Data Book should answer most questions about the dam. A list of reference is included if additional information is needed. Continual updating of the Data Book will be required as future inspections are

made, new problems arise, new investigations are undertaken and remedial treatments performed. Documentation of all projects may be done in the Data Book format which is the primary data base for the team evaluating the safety of a dam. (Guidelines on standardized Data Book format are available at http://www.cwc.gov.in/ Dam_safety.html)

4. O & M Manual:

It is desirable that a separate manual is available with the officers .The officers Incharge of such works are requested to personally go through the manual and maintain the records from time to time in such a manner as to give their successors complete and correct idea of the state of each of the several storage works in their charge and the different standing orders on all matters concerning the works. This will enable them to tackle problems as they arise, by quickly referring to the manual as far as possible without having to depend on the office to give information. The complete set of manual for each of the storage works should be personally handed over to successor by each concerned officer.

Copies of the maintenance manual shall be maintained at all offices right from sectional office to Circle office.

It is also necessary that the manuals are inspected at the time of inspection by the superior officers. Record of handing over and inspection should be maintained.

5. Record Drawing & Completion Report :

The importance of record drawings & completion report as an archival data need not be emphasized. All efforts should be made by field engineers to prepare Record Drawing & Completion Report and store them for future reference.

Part-7

Dam Health &Rehabilitation Monitoring Application (DHARMA)

Part-7 DHARMA: Dam Health and Rehabilitation monitoring application

Introduction :

Dam health & Rehabilitation Monitoring application (DHARMA) is a web based asset management software to support the effective collection and management of authentic asset and health data for all large dams in India and address key dam safety challenges of

i)Insuring Completeness of information.

ii) Bring stake holders together

iii) Effectively managing asset inventory.

iv) Assess soundness of dame health.

Design and Development :

DHARMA software will consist of seven modules.

i)project features

ii) Project portfolio

iii) Engineering features.

iv)Asset health.

v) Asset rehabilitation.

vi) Stake holders and

vii) Document library.

The first three modules (i to iii consist of mostly static data, to be enter once and rarely undergo a change where as modules iv) and v) will be dynamic and requires regular updating with information associated with inspections investigations, instrumentation and rehabilitation works. Modules vi) and vii)contain information useful for reference.

All field EE's are required to fillup attached two forms (Dam Data Manager & Dam Health Engineer) for each Dam in their jurisdiction by 15th July 2021 & its review will be taken by Hon. DG, MERI, Nashik by 15th Aug 2021.

DHARMA Application User Registration Form

Dam Data Manager

1.	Date of Application:	< dd/mm/yyyy>		
2.	Type of User:	DamDataManager		
3.	Name of the Applicant:	<Title>. <Name>		
4.	Designation:			
5.	Name of the Organization:			
6.	Complete Postal Address:			
7.	Email ID:			
8.	Mobile Number:		Office Tel. Number:	
9.	Current Responsibilities:	☐ Coordinating DamSafety ☐ Water ResourceManagement ☐ DamDesign ☐ Dam Construction /Rehabilitation ☐ DamOperations ☐ Academic /Research ☐ Other: <pleasespecify>		
10.	Viewing Permission Required for:	☐ ProjectFeatures ☐ ProjectPortfolio ☐ EngineeringFeatures		
11.	Editing Permission Required for:	☐ ProjectFeatures ☐ ProjectPortfolio ☐ EngineeringFeatures		
12.	Provide List of Dams			

Please select out of the choice provided; add separate sheets for providing additional information.

Declaration: I, hereby declare that the information provided in the application is true. I further declare that I will not use the information collected from DHARMA software for any unlawful activities and/or to the detriment of the Central or StateGovernments.

Signature and Seal / stamp of the Applicant:	Signature:	
	Name:	
	Designation:	
	Seal / Stamp:	

Please send the completed Application Form to the concerned Licensee.

DHARMA Application User Registration Form

Dam Health Engineer

1.	Date of Application:	< dd/mm/yyyy>		
2.	Type of User:	DamHealthEngineer		
3.	Name of the Applicant:	<Title>. <Name>		
4.	Designation:			
5.	Name of the Organization:			
6.	Complete Postal Address:			
7.	Email ID:			
8.	Mobile Number:		Office Tel. Number:	
9.	Current Responsibilities:	☐ Coordinating DamSafety ☐ Water ResourceManagement ☐ DamDesign ☐ Dam Construction /Rehabilitation ☐ DamOperations ☐ Academic /Research ☐ Other: <pleasespecify>

Part-8

Health Status of Gated Dam (As per Mechanical Organization)

Part- 8 Health Status of Gated Dam (As per Mechanical Organisation)

8.1 General

As per GR.NO.ID/1078/23/8/IMP/2 Dtd.10/09/1980, Dam Safety Organization has been established by Government of Maharashtra for effective monitoring the safety aspects of dam.

As per Maharashtra Government Guidelines and regulation, Chief Engineer (Mechanical), Water Resources Dept. Nashik assigned Dams gate Inspection work to Superintending Engineer, Mechanical Circle, Nashik to assure proper operation and maintenance of Dam gates

Under Superintending Engineer, Mechanical Circle, Nashik Executive Engineer, Inspection unit, Aurangabad and Executive Engineer, Sluice Gate Mfg. Division, Dapodi , Pune are looking after all the inspection works.

Division offices Conduct all pre monsoon & Post Monsoon Gate Inspection work of Government, Semi Government, & Private Dams and send Reports to related authorities for same.

After Inspection work the observed points or deficiencies are classified into various categories as given below.

Def. Category-1	Dams with Major Deficiencies which may lead to dam failure	Very Serious Defects
Def. Category-2 (2 A)& (2B)	Dams with rectifiable Deficiencies needs immediate attention	Serious Defects (2A)
		Require immediate attention (2B)
Def. Category-3	General Defects	General Defects

In the year of 2021 Pre and Post Monsoon inspection of total 161 Gated dams have been carried out by Mechanical Organization. It is to be noted that Chief engineer (Mechanical) W.R.D Nashik, prepares independently the detail Health status Report of all the gated dams inspected by mechanical Organization. This report is published and submitted to WRD and circulated to all Concern Chief Engineers.

In this Health Status Report, only the dam wise numbers of deficiencies noted by mechanical Organization are given in this part of ADHSR. For details regarding the actual deficiencies Health Status Report circulated by Mechanical Organization shall be referred.

8.2 Overall Health Statues of Gated Dams

40 Class-I gated dams in the Pune region are inspected by Mechanical Organization.
Category -1 deficiency is not observed on any dam. Category -2 & 3 deficiencies are observed on all the 40 dams. Total 863 Category -2 deficiencies and total 2149 Category -3 deficiencies are observed on the dams in the region.

Table 8.1
